CURRICULUM STRUCTURE
FOR
BACHELOR OF TECHNOLOGY
IN
MECHANICAL ENGINEERING

Haldia Institute of Technology
(An Autonomous Institution Under Maulana Abul Kalam Azad University Of Technology, West Bengal)
VISION

To sustain in the highly competitive global market, it is mandatory that one should always thrive for excellence. The academic fraternity is no exception in this regard. Engineering education being a professional course, the credibility of an engineering institution is judged primarily by the various performance attributes of its stake holders i.e. the students. In congruence with this philosophy, the vision of the department is to create a platform for quality teaching-learning process where, the students are not only taught various subjects as per framed syllabus, but also exposed to the topic beyond it with an emphasis on blending of knowledge and skill and relevance of a topic or subject with the real-life situation so that one can adapt to the industrial requirements.

MISSION

**Contemporary Skills (M1):** To create qualified and proficient technocrats having contemporary skills through outcome-based and self-learning strategies.

**Higher Studies And Research (M2):** To encourage innovation-oriented and problem-based research capabilities in the young engineers through higher studies to nurture the progress of the society.

**Ethical And Human Values (M3):** To instill strong ethical values and good professional behavior, so as to adapt and absorb emerging changes in the field of engineering profession.
PROGRAMME EDUCATIONAL OBJECTIVES:

**PEO 1:** To educate and groom the students with strong understanding and knowledge of mathematics, basic science and engineering coupled with contemporary skills in the areas of Mechanical Engineering

**PEO 2:** To equip the students for successful professional careers in Mechanical Engineering domain of private and government enterprises, to prepare for PG studies in engineering, management and allied areas, and to prepare for entrepreneurship.

**PEO 3:** To make the students aware of the societal aspects of engineering profession, ethical practices in profession, and the importance of team work to function coherently and effectively in multi-disciplinary context.

PROGRAM SPECIFIC OUTCOMES:

**PSO 1:** Should be able to clearly understand, analyze and comprehend the different courses of Mechanical Engineering and other interdisciplinary courses and develop a holistic approach for implementation.

**PSO 2:** Should be able to apply the knowledge, techniques and skills acquired to provide solutions to the real world problems related to Mechanical Engineering.

**PSO 3:** Should have the capability to comprehend the advancements in the usage of modern design tools and latest techniques to analyze and design subsystems/processes for a variety of applications.
PROGRAM OUTCOMES (PO):

PO 1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO 2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO 3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO 4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO 5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO 6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO 7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO 8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO 9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO 10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO 11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one’s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO 12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
A. Definition of Credit

<table>
<thead>
<tr>
<th>Activity</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Hr. Lecture (L)</td>
<td>1 credit</td>
</tr>
<tr>
<td>1 Hr. Tutorial (T)</td>
<td>1 credit</td>
</tr>
<tr>
<td>1 Hr. Practical (P)</td>
<td>0.5 credits</td>
</tr>
</tbody>
</table>

B. Range of credits

All B. Tech. programs include a range of credits from 160 to 165.

C. Mandatory Additional Requirement (MAR) for earning B. Tech Degree

Every student, who is admitted to the 4 years B. Tech program from the academic year 2019-20 onwards, is required to earn *minimum 100 Activity Points*, in addition to the required academic grades for getting B. Tech degree.

The MAR activities, (as per guideline of AICTE / affiliating University, MAKAUT) will provide necessary needs of modern industry and the society. Through this program, irrespective of one’s technological field, each student develops the skill of active participation in the co-curricular and extra-curricular activities through SAWYAM based learning activities. Such activities enhance student’s employability and global acceptances. Details are given in *Annexure-I*.

D. MOOCs for B. Tech Honours

A student will be eligible to get B.Tech Degree *with Honours*, if he/she completes an *additional 20 credits*, through Massive Open Online Courses (MOOCs). The complete description of the MOOCs relevant for the first year course is given in *Annexure-II*.

E. Guidelines regarding Mandatory Induction Program for the new students

The aim of the Induction Programme is to acclimatize the students to the environment of their engineering institution, give them a flavour of the exciting new world of education that they are entering, provide them with mentoring schemes, and make them aware of their neighbourhood, society and people. This will allow them to evolve as well rounded individuals. Details are given in *Annexure-III*.

Course Objectives

- Providing the core concepts of higher Engineering Mathematics and describing the techniques, this works as an essential tool to solve the problems in their field of applications.
- To provide an overview of Differential Equations, Laplace Transform and Complex Analysis to engineers.

Module-1 [8L]
Matrix & Determinant:
Inverse and rank of a matrix; Elementary row and column operations over a matrix; System of linear equations and its consistency; Rank and nullity; Determinants; minors and cofactors; Eigen values and eigen vectors; Diagonalization of matrices; Cayley Hamilton theorem; Orthogonal transformation.

Module-2 [9L]
Differential Calculus:
Successive derivative, Leibnitz’s Theorem; Rolle’s Theorem, Mean value theorem, Taylor’s and Maclaurin’s theorems with remainders;

Sequence and Series:
Basic concept of Convergence of sequence and series; Tests for convergence: Comparison test, Cauchy’s Root test, D’ Alembert’s Ratio test (statements and related problems on these tests), Raabe’s test; Alternating series; Leibnitz’s Test (statement only); Absolute convergence and Conditional convergence.

Module-3 [8L]
Integral calculus:
Improper integrals; Beta and Gamma functions and their properties; Convergence of improper integrals; Applications of definite integrals to evaluate surface areas and volumes of revolutions. Differentiation under integral sign.

Module-4 [10L]
Calculus of function of several variables:
Introduction to functions of several variables; Limit and continuity, Partial derivatives, Homogeneous functions and Euler’s theorem up to three variables, Chain rules, Differentiation of implicit functions, Total differentials and their applications, Jacobians up to three variables Maxima, minima; Saddle points of functions; Lagrange Multiplier method and their applications; Concept of line integrals, Double and triple integrals.

Module-5 [10L]
Vector Calculus:
Scalar and vector triple products with related problems, Equation of straight line, plane and sphere. Vector function of a scalar variable, Differentiation of a vector function, Scalar and vector point functions, Gradient of a scalar point function, divergence and curl of a vector point function, Directional derivative. Related problems on these topics. Green’s theorem, Gauss Divergence Theorem and Stoke’s theorem (Applications only, proofs not required).

Course Outcomes (COs)

CO1. To provide students with skills in algebra and calculus which would enable them to devise engineering solutions for given situations they may encounter in their profession.

CO2. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice by enhancing the power of knowledge and imagination.
CO3. Prepare students for realization of journal papers outcomes, and expose them to the world of research. Illustrate the current research works and publications of the subjects in different fields adopted by the students as per course curriculum in various journals and literature.

CO4. To explore and enhance research potential explain how the ideas those are adopted can be implemented through projects and demonstrate various models, recent project proposals executing the knowledge adopted from the course.

CO5. An ability to function on multi-disciplinary teams. Lighten on the latest and modern developments in the fields.

CO6. Explain about ethical awareness and impact in the field of environmental, social and safety of the finished products. Describe the pollution, legal aspects and impacts may arise in large scale production.

Learning Resources
1. Advanced Engineering Mathematics, by Erwin Kreyszig is published by Wiley India
2. Engineering Mathematics: B.S. Grewal (S. Chand & Co.)
Paper Name: Mathematics-II  
Paper Code: BS-M201  
Category: Basic Science Course  
L-T-P: 3-1-0  
Semester: Second  
Credit: 4

Total Lecture: 45L

Course Objectives
- Providing the core concepts of higher Engineering Mathematics and describing the Techniques, this works as an essential tool to solve the problems in their field of applications.
- To provide an overview of Differential Equations, Laplace Transform and Complex Analysis to engineers.

Module -1[10L]
Ordinary differential equation (ODE)- First order and first degree: Exact equations, Necessary and sufficient condition for exactness of a first order and first degree ODE (statement only), Rules for finding Integrating factors, Linear and non-linear differential equation, Bernoulli’s equation. General solution of ODE of first order and higher degree (different forms with special reference to Clairaut’s equation).
Second order and first degree: General linear ODE of order two with constant coefficients, C.F. & P.I., D-operator methods for finding P.I., Method of variation of parameters, Cauchy-Euler equations.

Module -2[5L]
Basics of Graph Theory: Graphs, Digraphs, Weighted graph, Connected and disconnected graphs, Complement of a graph, Regular graph, Complete graph, Subgraph.; Walks, Paths, Circuits, Euler Graph, Matrix representation of a graph, Adjacency and incidence matrices of a graph, Graph isomorphism, Bipartite graph.

Module -3[10L]
Laplace Transform: Introduction to integral transformation, functions of exponential order, Definition and existence of LT (initial and final value theorem with applications proofs not required), LT of elementary functions, Properties of Laplace Transformations, Evaluation of sine, cosine and exponential integrals using LT, LT of periodic and step functions.
Definition and properties of inverse LT Convolution Theorem (statement only) and its application to the evaluation of inverse LT, Solution of linear ODEs with constant coefficients (initial value problem) using LT.

Module -4[12L]

Complex Integration: Concept of simple curve, closed curve, smooth curve & contour. Some elementary properties of complex Integrals. Line integrals along a piecewise smooth curve. Cauchy’s theorem (statement only). Cauchy-Goursat theorem (statement only). Cauchy’s integral formula, Cauchy’s integral formula for the successive derivatives of an analytic function, Cauchy’s integral formula for the successive derivatives of an analytic function.

Module -5[8L]
Zeros and Singularities of an Analytic Function & Residue Theorem.
Residue, Cauchy’s Residue theorem (statement only), problems on finding the residue of a given function, evaluation of definite integrals \( \int_{0}^{\infty} \frac{\sin x}{x} dx, \int_{0}^{2\pi} \frac{d\theta}{a+bc\cos\theta+c\sin\theta} \), \( \oint_{C} \frac{P(z)}{Q(z)} dz \) (elementary cases, P(z) & Q(z) are polynomials of 2nd order or less). Evaluation of certain improper integrals using the Bromwich contour.

Course Outcomes(COs)
Haldia Institute of Technology  
(An Autonomous Institution Under Maulana Abul Kalam Azad University Of Technology, West Bengal)  
**Syllabus for B. Tech in Mechanical Engineering**  
*(Applicable from the academic session 2020-2021)*

**CO1.** Recall the earlier mathematical thoughts, such as idea of derivative, integration, ordinary differential equations and complex algebra.

**CO2.** Exhibit the idea of ordinary differential equation of first and higher order. Recognize the concept of graph theory and Laplace transform and complex variable.

**CO3.** Apply the knowledge of Laplace transform to reduce the complexity of differential equation. Use different graphical algorithm to find optimal solutions.

**CO4.** Analyze the ideas of mentioned mathematical tools so that it can be implemented to real time engineering problems.

**CO5.** Justify and make gradation of above mentioned mathematical tools and determine the right approach to solve multidisciplinary engineering problems.

**CO6.** Build up logical and analytical skills to create a new idea appreciated by academics, research & emerging trends in industry.

**Learning Resources**

1. Probability and Statistics for Engineers, Miller & Freund R.A.Johnson, Prentice Hall of India
3. Graph Theory: V. K. Balakrishnan, (Schaum’s Outline, TMH)
5. Introductory Course in Differential Equations: Daniel A. Murray (Longmans & Green).
6. Graph Theory: N. Deo (Prentice-Hall of India)
Paper Name: Physics – I  
Category: Basic Science Course  
Paper Code: BS-PH 101 / BS-PH 201  
L-T-P: 3-1-0  
Semester: First / Second  
Credit: 4  
Total Lecture: 42L

Course Objectives

- To introduce the rudimental and relevant concepts of physics to different branches of Engineering and Technology.
- To compile all the knowledge acquired from the course and to apply in industry, academia, and research keeping in the mind about ethical awareness and impact in the field of environmental (pollution), social (legal) and safety.

Module-1 [10L]  
Vector Calculus  
Gradient of a Scalar function, Divergence and Curl of Vector field, Vector Integration – Line-, surface and volume integration - Divergence and Stoke’s Theorem

Oscillations And Waves  
Simple Harmonic Oscillation- Motion of simple and compound pendulum –Energy Considerations - Coupled oscillations, approximate solutions, linear and transverse oscillations.  
Forced oscillation – Electromechanical Analogy between Mechanical Oscillator with Electrical circuit – Mechanical Impedance - Transient and Steady state oscillations – Resonance - Power considerations - Low and high frequency responses – Bandwidth – Quality factor - Sharpness of Resonance

Module -2 [11L]  

Diffraction – Fresnel and Fraunhofer diffraction - Single Slit, Double Slit and N-Slit Diffraction (Qualitative discussion only)

Polarization – Introductory discussion of Polarization – States of Polarization – Brewster’s law – Malus Law – Phase Retardation Plate – Optical Activity

Module -3 [5L]  
Statistical Mechanics  
Phase Space (μ- and Γ- phase space) – Macro states and Microstates – Density of States - Statistical Ensemble and Thermodynamic Probability  
Classical Statistical systems (Maxwell - Boltzman statistics) and quantum statistical systems (Fermi-Dirac and Bose-Einstein Statistics) and their applications

Module -4 [10L]  
Quantum Mechanics  

Module -5[6L]  
Dielectric Polarization  
Fundamentals of Dielectric polarization – Macroscopic and microscopic field – Electronic, Ionic, Orientational and Space charge polarization (Qualitative overview) - dielectric loss- Loss tangent - Application of dielectric materials
Magnetic Properties
Fundamentals of magnetic properties – Classification (Dia, Para, Ferro, Anti-ferro, Ferri, Super-para) of magnetic materials – Curie temperature – Magnetic domain – Hysteresis – hard and soft magnetic materials – Applications of Magnetic materials

Course Outcomes(COs)
CO1. Describe how different electronic tools, various parameters & variables of fundamental physics related to the programme. To overcome & eliminate different constraints those may arises by solving the physical and numerical problems.
CO2. Overall enhancement of innovative problems solving ability by enhancing the power of knowledge and imagination.
CO3. Describe the current research works and publications of the subjects in different fields adopted by the students as per course curriculum in various journals and literature.
CO4. Describe how the ideas those are adopted can be implemented through projects and demonstrate various models, recent project proposals to execute the knowledge adopted from the course.
CO5. Define how the ideas can be share with the multi - disciplinary personals. Lighten on the latest and modern developments in the fields.
CO6. Explain about ethical awareness and impact in the field of environmental, social and safety of the finished products. Describe the pollution, legal aspects and impacts may arise in large scale production.

Learning Resources
1. Vector Analysis – M.R.Spiegel
2. Waves and Oscillation – N.k.Bajaj
4. Principles of Physics, 10ed, David Halliday, Robert Resnick Jearl Walker , Wiley
7. Modern Quantum Mechanics, J. J. Sakurai, Cambridge University Press
8. Solid State Physics, S.O.Pillai
Course Objective

- To develop the interest among the students regarding chemistry and their applications in engineering
- To develop confidence among students about chemistry, how the knowledge of chemistry is applied in technological field.

Module I [11L]
**Thermodynamics:** (6L)
Preliminary information on First Law of Thermodynamics (Principle, Molar Heat Capacity; Relation of $C_p$ and $C_V$ (for Ideal and Real Gas); Joule’s Experiment, Joule-Thompson Co-efficient, Throttling, Adiabatic Relationship); Second Law, Engine; Carnot’s Cycle; Entropy, Entropy change; Entropy of system/surrounding/Universe; Free Energy, Free energy expression; Gibbs-Helmholtz equation; Clausius-Clapeyron equation; Maxwell relations.

**Electrochemistry:** (2L)
Cell construction; Primary and Secondary Cell; Nernst Equation; Relation with $\Delta G$, $\Delta H$ and $\Delta S$; pH of Cell; Batteries; Fuel Cell

**Chemical Kinetics:** (3L)
Rate equation; Collision and Activation Theory; Temperature dependency; Complex Reaction; Parallel reaction; Consecutive reaction; Chain Reaction; Homogeneous and Heterogeneous Catalyst; Acid base catalysis; Enzyme Catalysis; Michaelis Menten equation.

Module II [8L]
**Atomic structure:** (3L)
Preliminary Accounts on Bohr-Sommerfeld model of the atom (Electronic configuration and Quantum numbers; Shapes of $s$, $p$, $d$, $f$ orbitals - Pauli’s exclusion principle - Hund’s Rule of maximum multiplicity – Aufbau principle). Emission and absorption spectra, line and band spectra; Hydrogen spectrum – Lyman, Balmer, Paschen, Brackett and Pfund series; de-Broglie’s hypothesis; Heisenberg’s uncertainty principle – wave nature of electron – Schrodinger wave equation (No derivation). Eigenfunctions and eigenvalues.

**Chemical bonding and Coordination Chemistry:** (5L)
Elementary information on Chemical bonding including VBT, Shapes of molecules with hybridization, Valency shell electron pair repulsion (VSEPR) theory. Molecular orbital of diatomic molecules (e.g. $H_2$, $O_2$, $N_2$, $CO$, HF, CN’, NO’). $\pi$-molecular orbital of butadiene and benzene. Crystal field theory of coordination compounds- magnetism, spin and orbital contribution, quenching of magnetic moment: $d$-$d$ transitions, color. Metallic bond – concept of conductor, semiconductor, insulator; photoelectric effect.

Module III [7L]
**Organic Spectroscopy** (7L)
**UV-Visible Spectroscopy:** Types of electronic transitions, chromophores and auxochromes; Bathochromic and Hypsochromic shifts; intensity of absorptions (Hyper-/Hypochromic effects); application of Woodward’s Rules for calculation of $\lambda_{max}$ for the following systems: conjugated dienes, relative positions of $\lambda_{max}$ considering conjugative effect, steric effect, solvent effect.
**IR Spectroscopy:** Introduction; modes of molecular vibrations (fundamental and nonfundamental); IR active molecules.
**NMR Spectroscopy:** Basic principles of Proton Magnetic Resonance; NMR active molecules; equivalent and non-equivalent protons with examples; chemical shift. Significance of the terms: up-/downfield, shielded and deshielded protons.
**Mass Spectroscopy:** Introduction; Principles, Ion sources, Fragmentation and analysis of mass spectra.
Module IV [6L]
Polymer (3L)
Molecular weight of Polymers (number average, weight average, viscosity average), Polymerization processes (addition and condensation), Mechanism of addition polymerization (free radical, cationic, anionic, coordination), Poly Dispersity Index (PDI), Degree of Polymerization, Stereo-regularity of polymers (crystallinity and amorphicity). Vulcanization. Conducting, semi-conducting polymers and doping.

Corrosion (3L)
Types of corrosion (dry, wet), Pitting corrosion, Crevice corrosion, Galvanic series, Stress corrosion cracking, Corrosion of polymers. Protection from Corrosion (Surface treatments, Reactive coatings, Anodization, Biofilm coatings) Sacrificial anode protection, Rust removal, Passivation, Water treatment (waste, surface), Alkalinity, Scale-sludge.

Module V [6L]
Stereochemistry (4L)
Different types of isomerism; concept of chirality and optical activity (upto two carbon atoms); elements of symmetry [plane (σ), center (i) and alternating axis (Sn) of symmetry]; interconversion of Fischer and Newman representations; threo and erythro, D and L, CIP Rules: R/S (upto 2 chiral carbon atoms), E/Z nomenclature. Conformational analysis of ethane, n-butane.

Structure and reactivity of Organic molecule (2L)
Molecular Effects: Inductive, resonance, hyperconjugation, steric effects. Oxidation and reduction reactions for organic compounds. Some name reactions: Aldol, Cannizzaro, Michael, Claisen-Schmidt, Wittig reactions.

Module VI [4L]
Elementary Chemical Biology:
Origin of Life and Chemical Elements; Role of concentration of ions/small molecules in the growth profile of cells; Trace and Ultratrace elements; Basic Biomolecules, Elementary reactions in the biological system and roles of metal ions. Function of Fe (with special reference to Hemoglobin and Myoglobin) and Cu (with special reference to Hemocyanin) in Biological system. Toxicity of Hg, As, Pb, F, P(V). Synthesis of some commonly used drug molecules (Aspirin, Paracetamol, Salbutamol and Ibuprofen). Synthesis of some commonly used Pesticides and Insecticides in Agriculture: DDT, Gammexane/Lindane (organochlorine group), Parathion (organophosphate group) and Carbaryl (carbamate group).

Course Outcomes (COs)
CO1. To memorize the elementary topics of chemistry such as chemical thermodynamics, atomic structures, electromagnetic spectroscopy, corrosion chemistry, electrochemistry, organic reactions and synthesis of drug molecules.
CO2. To acquire knowledge on the fundamental concepts of chemical thermodynamics, atomic structures, electromagnetic spectroscopy, corrosion chemistry, electrochemistry, organic reactions, polymers and synthesis of drug molecules.
CO3. Making use of concepts of drug molecules, polymer chemistry, corrosion chemistry and battery technology to meet day to day necessities including application of the organic synthesis, Maxwell’s equations, spontaneity and equilibrium reactions etc.
CO4. analyse versatile and novel problems and sorting them out, covering all the topics of the entire course.
CO5. rationalize, explain and corroborate several chemical problems, determine the most plausible approach of solving real life interdisciplinary chemical complications.
CO6. To construct a purposeful and efficient model through which learners can be able to develop and solve trivial as well as up to date problems recognized by academia, researchers and industries.

Learning Resources
1. P.C.Rakshit, , Physical Chemistry Sarat Book House
2. S. Pahari, , Physical Chemistry New Central Book Agency
4. J. D. Lee, Concise Inorganic Chemistry, 5th Ed., Wiley India Pvt. Ltd.
13. B. K. Sharma, Industrial Chemistry (including Chemical Engineering), GOEL Publishing House.
Paper Name: Programming for Problem Solving  
Category: Engineering Science Course

Paper Code: ES-CS-101/ES-CS -201  
Semester: First / Second

L-T-P: 3-1-0  
Credit: 4

Total Lecture: 40L

Course Objectives

- To introduce to students to the field of programming using language.
- To enhance their analyzing and problem solving skills.

Module 1 [ 12L]  
Unit 1: Introduction to Programming (4 L)

Introduction to components of a computer system (disks, memory, processor, where a program is stored and executed, operating system, compilers etc.)

Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flowchart/Pseudocode with examples.

From algorithms to programs; source code, variables (with data types) variables and memory locations, Syntax and Logical Errors in compilation, object and executable code

Unit 2: Arithmetic expressions and precedence (2 L)  
Unit 3: Conditional Branching and Loops (6 L)

Writing and evaluation of conditionals and consequent branching
Iteration and loops

Module 2 [ 12L]  
Unit 1: Arrays (6 L)

Arrays (1-D, 2-D), Character arrays and Strings

Unit 2: Basic Algorithms (6 L)

Searching, Basic Sorting Algorithms (Bubble, Insertion and Selection), Finding roots of equations, notion of order of complexity through example programs (no formal definition required)

Module 3 [ 9L]  
Unit 1: Function (5 L)

Functions (including using built in libraries), Parameter passing in functions, call by value, Passing arrays to functions: idea of call by reference

Unit 2: Recursion (4 L)

Recursion, as a different way of solving problems. Example programs, such as Finding Factorial, Fibonacci series, Ackerman function etc. Quick sort or Merge sort.

Module 4 [ 7 L]  
Unit 1: Structure (4 L)

Structures, Defining structures and Array of Structures

Unit 2: Pointers (2 L)

Idea of pointers, Defining pointers, Use of Pointers in self-referential structures, notion of linked list, dynamic memory allocation, Union (no implementation)

Unit 3: File handling (1 L)

Basic idea about read, write, append operation if time is available, otherwise should be done as part of the lab

Course Outcomes (COs)

CO1. To formulate simple algorithms for arithmetic and logical problems.
CO2. To test and execute the programs and correct syntax and logical errors.
CO3. To implement conditional branching, iteration and recursion.
CO4. To decompose a problem into functions and synthesize a complete program using divide and conquer approach. To use arrays, pointers and structures to formulate algorithms and programs.
CO5. To apply programming to solve matrix addition and multiplication problems and searching and sorting problems.
CO6. To apply programming to solve simple numerical method problems, namely root finding of function, differentiation of function and simple integration.

Learning Resources
Haldia Institute of Technology
(An Autonomous Institution Under Maulana Abul Kalam Azad University Of Technology, West Bengal)

Syllabus for B. Tech in Mechanical Engineering

</tbody>
</table>

Total Lecture: 45L

Course Objectives

- To understand the impact of technology in a global and societal context.
- To provide working knowledge for the analysis of basic DC and AC circuits used in electrical and electronic devices.

Module 1 [3L]
Electromagnetism:
Magnetic circuits, Analogous quantities in magnetic and electric circuits, Faraday’s law, self and mutual inductance, Hysteretic and Eddy current losses, Self and Mutual inductance, B-H loop, Hysteresis and Eddy current loss

Module 2 [10L]
Circuits Analysis

Module 3 [6L]
Transformers
Single phase transformer: Core and shell type construction, ideal and practical transformer, EMF equation, no load and on load, operation, phasor diagram and equivalent circuit, losses of a transformer, open and short circuit tests, regulation and efficiency calculation, Auto-transformer.

Module 4 [10L]
Electrical Machines
DC Machine: Construction, working, torque speed characteristic and speed control of separately excited dc motor.
AC Machine: Construction, Generation of rotating magnetic fields and working of a three-phase induction motor, Torque-slip characteristic, Brief idea about Single Phase Induction Motor and Synchronous generators

Module 6 [8L]
Transistors
Transistor Biasing and Bias stability: calculation of stability factor with variation of Ico Different operating modes; CE, CB, CC and their properties; small signal low frequency operation of transistors; equivalent circuits h parameters as a two port network. Transistors as amplifier: expression of voltage gain, current gain, input impedance and output impedance, frequency response for CE amplifier with and without source impedance(quantitative)

Module 7 [5L]
Field Effect Transistor
Construction and characteristics of JFET (N channel only), Transfer characteristics; construction and characteristics of MOSFET (N channel only), depletion and enhancement type; CS, CG, CD configuration

Module 8 [3L]
Operational Amplifier
Concept of virtual earth, inverting and non-inverting mode of operation, voltage summing, difference, constant gain multiplier, voltage follower, comparator, integrator, differentiator.

Course Outcomes (COs)
Haldia Institute of Technology  
(An Autonomous Institution Under Maulana Abul Kalam Azad University Of Technology, West Bengal)  
Syllabus for B. Tech in Mechanical Engineering  
(Applicable from the academic session 2020-2021)

CO1. To acquire knowledge of different theorems for electric and magnetic circuits analysis. Explain the working principle, construction, applications of Transformer, DC machines, AC machines. Concept of 3 phase power, JFET, MOSFET, OPAMP, sinusoidal voltages and currents in different machines and circuits. Explain fundamental laws and theorems governing the working different electrical machines and circuits. Able to identify the procedures for calculations of different circuit parameters.

CO2. Use the concepts of applying mathematics and science principles, trigonometry, complex algebra, phasor operations to provide solution of different simple problems; critical circuit problems related to electrical systems.

CO3. Analyze series circuits, flow of currents, algebraic sum of voltages (voltage drops) in any closed path in a circuit to examine the behavior of electric circuits and performance characteristics and efficiency of electrical machines.

CO4. Evaluate and judge whether the solutions obtained are correct and matches the required parameters and characteristics.

CO5. Use the knowledge acquired to investigate unknown problems and design and assemble to find a solution to the problem.

Learning Resources
2. Basic Electrical Engineering, V.N Mittle & Arvind Mittal, TMH, Second Edition
3. Basic Electrical Engineering, Nath & Chakraborti
7. Advance Electrical Technology, H.Cotton, Reem Publication
8. Basic Electrical Engineering, R.A. Natarajan, P.R. Babu, Sictech Publishers
Course Objectives

- To acquire language skills,
- to develop linguistic and communicative competencies for Engineering students.
- to study academic subjects more effectively using the theoretical and practical components of English syllabus, and hence will develop study skills and communication skills in formal and informal situations.

Module 1: Theories of Communication [6L]

Theories and Principles of Communication: Definition, Process, Model (Schematic diagram of Shannon and Weaver’s Model of Communication), Types of Communication – Verbal and Non-verbal communication, Flows of communication
Barriers to communication

Workplace/Business Communication which can have the following items:

a) Scope of Oral Communication
b) Oral Business Communication: Introducing oneself in a professional setup - brevity, context, understatement, body language –

Task: Introducing others - introducing a junior professional to a senior professional, introducing an employee to a customer, introducing a colleague from your firm to an employee of another firm.

c) Telephone (audio and video) communication: choice of words, body language, paralinguistic elements of speech, enunciation, brevity, clarification, effective closure

Module 2: Applied Grammar [9L]

Common Errors in English
- Subject-verb agreement
- Tenses
- Noun-pronoun agreement
- Articles and Prepositions
- Misplaced or dangling modifiers
- Redundancies
- Cliché

Transformation of Sentences
- Active and Passive voice
- Direct and Indirect speech
- Degrees of Comparison

Use of phrases and clauses in sentences

Synthesis of Sentences: Simple, Complex and Compound

Module 3 Vocabulary Building [3L]

The concept of word formation: Compounding, Backformation, Clipping and Blending
Root words from foreign languages and their use in English

Acquaintance with prefixes and suffixes from foreign languages in English to form derivatives.

Synonym, antonym, phrasal verbs, one word substitution and standard abbreviation

Module 4 Basic Writing Skills [4L]

Documenting: definition, meaning, basic concept of documenting (print and online media), types of technical documents

Importance of proper punctuation

Creating coherence: Arranging paragraphs & Sentences in logical order

Creating Cohesion: Organizing principles of paragraphs in documents
Techniques for writing precisely

Module 5 Professional Writing Skills [10L]
Technical Report Writing: Types and formats
Comprehension, Précis and Expansion Writing, Essay Writing, Writing SOPs and Project Proposals.
Business Letters; Cover letter & CV
Office Correspondence:
- Notice
- Agenda
- Minutes
- Memo
- E-mail

Course Outcomes (COs)
CO1. Understanding the mechanism of interpretation through language learning by practicing reading, writing and comprehension skills.
CO2. Understanding complex engineering problems by a sound grammatically correct knowledge of the English Language & honing writing, and reading skills for software research, solutions, marketing etc.
CO3. Equipping learners to solve various problems related to aptitude test through the practice of various Verbal reasoning and grammar practice.
CO4. Development of analytical thinking through practice of analytical essays, business correspondence.
CO5. Learning effective communication strategies for handling criticism and adverse remarks and also knowing strategies of effective intervention, kinesics and courtesies and different components of soft skills.
CO6. Awareness about the society, public health and safety, growth and changes in society, culture and environment through comprehension, technical report writing practice.

Learning Resources
4. High School English Grammar by Wren and Martin
5. Common Errors in English by S. Prasad & K. P. Thakur, Bharti Bhawan Publishers
7. English Vocabulary in Use - McCarthy
Paper Name: Physics Laboratory – I
Category: Basic Science Course

Paper Code: (BS-PH-191 & BS-PH-291)
Semester: First / Second
Credit: 1.5

Periods: 36P

Course Objectives

- To provide exposure to the students with hand on experience for data acquisition, precession, statistical data analysis, graph plotting calculation of fundamental quantities and error estimation of different fundamental physics experiments relevant to various engineering discipline.

All students have to perform total 9 experiments taking at least one from Optics, Electricity & Magnetism, Quantum Mechanics, Miscellaneous experiments and Innovative experiment sections. (One Innovative experiment is mandatory)

List of Experiments

Optics Experiments
1. Determination of dispersive power of the material of a prism
2. Determination of wavelength of a monochromatic light by Newton’s ring
3. Determination of wavelength of a monochromatic light by Fresnel’s bi-prism
4. Determination of wavelength of the given laser source by diffraction method
5. Determination of numerical aperture, angle of acceptance and bending energy losses of an optical fiber

Electricity & Magnetism Experiments
1. Determination of thermo electric power of a given thermocouple.
2. Determination of specific charge (e/m) of electron by J.J. Thompson’s method.
3. Determination of dielectric constant of a given dielectric material.
4. Determination of Hall coefficient of a semiconductor by four probe method.
5. Determination of resistance of ballistic galvanometer by half deflection method and study of variation of logarithmic decrement with series resistance.
6. Determination of unknown resistance using Carey Foster’s bridge
7. Study of Transient Response in LR, RC and LCR circuits using Exp EYES
8. Generating sound from electrical energy using Exp EYES

Quantum Physics Experiments
1. Determination of Stefan-Boltzmann constant.
2. Determination of Planck constant using photocell.
3. Determination of Lande-g factor using Electron spin resonance spectrometer.
5. Determination of Band gap of semiconductor.
6. To study current voltage characteristics, load response, areal characteristic and spectral response of a photovoltaic solar cell.

Miscellaneous Experiments
1. Determination of Young’s modulus of elasticity of the material of a bar by the method of flexure
2. Determination of bending moment and shear force of a rectangular beam of uniform cross-section
3. Determination of modulus of rigidity of the material of a rod by static method
4. Determination of rigidity modulus of the material of a wire by dynamic method
5. To determine the moment of inertia of a body about an axis passing through its centre of gravity and to determine the modulus of rigidity of the material of the suspended wire
6. Determination of coefficient of viscosity by Poiseuille’s capillary flow method
7. Measurement of wavelength and velocity of Ultrasonic wave by using Ultrasonic Interferometer.
Innovative Experiments

1. Studies on Bandgap measurement of thin film using UV-VIS spectrophotometer.
2. Basic UV-VIS absorbance study of organic dyes.
3. Basic UV-VIS study of nano-particles (NPs) and quantum dots (Q Dots).
5. Basic photoluminescence study of nano-particles (NPs) and quantum dots (Q Dots).

Course Outcomes (COs)

CO1. Describe the various aspects, parameters, scales of experimental tools and design to conduct the experiments in the laboratory.

CO2. Analyze the methods of experiments and interpret the output results. Emphasis on the limitations of theoretical concepts, measuring instruments to perform the experiments and deviation of results from ideal one.

CO3. Describe the needs of publication of the outcome results and correlate the results with published papers in various journals and literature in the respective fields.

CO4. Describe how the ideas those are adopted can be implemented through projects and demonstrate various models, recent project proposals to execute the knowledge adopted from the course.

CO5. Define how the ideas can be share with the multi-disciplinary personals. Lighten on the latest and modern developments in the fields.

CO6. Explain about ethical awareness and impact in the field of environmental, social and safety of the finished products. Describe the pollution, legal aspects and impacts may arise in large scale production.

Learning Resources

1. B.Sc. Practical Physics – C.L.Arora
2. B.Sc. Practical Physics – Harnam Singh and Dr. P.S.Hemne – S.Chand
Paper Name: Chemistry Laboratory – I  
Category: Basic Science Course

<table>
<thead>
<tr>
<th>Paper Code: (BS-CH-191 &amp; BS-CH-291)</th>
<th>Semester: First / Second</th>
</tr>
</thead>
<tbody>
<tr>
<td>L-T-P: 0-0-3</td>
<td>Credit: 1.5</td>
</tr>
</tbody>
</table>

Periods: 36P

Course Objective

- To be able to design, carry out, record and analyze the results of chemical experiments.
- To demonstrate creative and independent thinking in both learning and work environments.
- To be able to use modern instrumentation and classical techniques, to design experiments and to properly record the results of their experiments.

Name of the Experiments

1. Preparation of Phenyl and Hand Sanitizer owing to its disinfectant and germicidal values.
2. Determination of the partition coefficient of a substance between two immiscible liquids.
3. Complexometric titration for determination of calcium and magnesium hardness of water.
4. Conductometric and pH-metric titration for determination of strength of a given HCl solution against a standard NaOH solution.
5. Determination of dissolved oxygen present in a given water sample.
6. Determination of chloride ion in a given water sample by Argentometric method (using chromate indicator solution)
7. Determination of percentage composition of sugar solution by viscosity measurement method.
8. Saponification/acid value of oil.
9. Preparation of some useful organic compounds: Pthalimide, Aspirin
10. Study on Thin layer chromatography

Course Outcomes (COs)

- **CO1.** To be able to design, carry out, record and analyze the results of chemical experiments. Students will demonstrate laboratory skills and show understanding in all major laboratory techniques and principles including instrumentation, synthesis, purification, analysis including green chemistry.
- **CO2.** To be skilled in problem solving, critical thinking and analytical reasoning. To operate a range of chemical instrumentation with adequate hands-on experiences.
- **CO3.** To be able to use modern instrumentation and classical techniques, to design experiments and to properly record the results of their experiments.
- **CO4.** To be able to use appropriate literature research and go through journal articles for useful information. Students will show proficiency at scientific communication including posters, presentations, laboratory reports and even journal articles.
- **CO5.** To demonstrate creative and independent thinking in both learning and work environments. Work independently and collaborate effectively with other people in a team. Self-evaluate their own learning progress and develop motivation and learning skills for lifelong learning.
- **CO6.** To learn the value of a professional work ethic including working as part of a diverse team. They will develop the ability to recognize ethical issues related to the impact of technological advances on society.

Learning Resources

5. Practical Workbook Chemistry (Honours), UGBS, Chemistry, University of Calcutta, 2015.
Haldia Institute of Technology
(An Autonomous Institution Under Maulana Abul Kalam Azad University Of Technology, West Bengal)

Syllabus for B. Tech in Mechanical Engineering
(Applicable from the academic session 2020-2021)

<table>
<thead>
<tr>
<th>Paper Name: Programming for Problem Solving</th>
<th>Category: Engineering Science Course</th>
</tr>
</thead>
<tbody>
<tr>
<td>L-T-P: 0-0-3</td>
<td>Credit:1.5</td>
</tr>
</tbody>
</table>

Periods: 36P

Course Objectives

- To formulate and test simple algorithms for arithmetic and logical problems, execute the programs and correct syntax and logical errors for implementing conditional branching, iteration and recursion.

The laboratory should be preceded or followed by a tutorial to explain the approach or algorithm to be implemented for the problem given

**Tutorial 1:** Problem solving using computers:
Lab 1: Familiarization with programming environment

**Tutorial 2:** Variable types and type conversions:
Lab 2: Simple computational problems using arithmetic expressions

**Tutorial 3:** Branching and logical expressions:
Lab 3: Problems involving if-then-else structures

**Tutorial 4:** Loops, while and for loops:
Lab 4: Iterative problems e.g., sum of series

**Tutorial 5:** 1D Arrays: searching, sorting:
Lab 5: 1D Array manipulation

**Tutorial 6:** 2D arrays and Strings
Lab 6: Matrix problems, String operations

**Tutorial 7:** Functions, call by value:
Lab 7: Simple functions

**Tutorial 8 & 9:** Numerical methods (Root finding, numerical differentiation, numerical integration):
Lab 8 and 9: Programming for solving Numerical methods problems

**Tutorial 10:** Recursion, structure of recursive calls
Lab 10: Recursive functions

**Tutorial 11:** Pointers, structures and dynamic memory allocation
Lab 11: Pointers and structures

**Tutorial 12:** File handling:
Lab 12: File operations

Course Outcomes (COs)

**CO1.** To formulate simple algorithms for arithmetic and logical problems. To translate the algorithms to programs (in C language).

**CO2.** To test and execute the programs and correct syntax and logical errors. To implement conditional branching, iteration and recursion.

**CO3.** To decompose a problem into functions and synthesize a complete program using divide and conquer approach.

**CO4.** To use arrays, pointers and structures to formulate algorithms and programs.

**CO5.** To apply programming to solve matrix addition and multiplication problems and searching and sorting problems.

**CO6.** To apply programming to solve simple numerical method problems, namely root finding of function, differentiation of function and simple integration.
Periods: 39P

Course Objectives

- To give the basic working knowledge required in various engineering based constructions, function, use and application of different working tools, equipment, and machines as well as the technique of manufacturing a product from its raw material.

[Before practice, background lectures will be delivered on the topics. Tool specifications and their materials will be described. Brief reports on the work done will be submitted by the students and evaluation will be made on the basis of examination of the report and viva, conducted by the teachers.]

Theory

1. Carpentry (Wood Working)

Timber, Seasoning and Preservation, Plywood and Plyboards, Carpentry Tools, Engineering applications. Different Joints

2. Metal Joining

Definitions of welding, brazing and soldering processes, and their applications. Oxy-acetylene gas welding process, equipment and techniques. Types of flames and their applications. Manual metal arc welding technique and equipment. AC and DC welding, electrodes, constituents and functions of electrodes. Welding positions. Types of weld joint. Common welding defects such as cracks, slag inclusion and porosity.

3. Bench work and Fitting

Tools for laying out, chisels, files, hammers, hand hacksaw, their specifications and uses.

4. Metal Cutting

Introduction to machining and common machining operations. Cutting tool materials, geometry of cutting tool, cutting fluid. Definition of machine tools, specification and block diagram of lathe, shaper, milling, drilling machine and grinder. Common lathe operations such as turning, facing and chamfering and parting. Difference between drilling and boring. Use of measuring instruments like micrometer / vernier caliper.

5. Tin Smithy

Sheet metal introduction, tools and operations, Shearing and Bending of sheets, types of joints

Jobs to be made in the Workshop

Group A (6 P)

Carpentry Shop: T-Lap joints and Dovetail joint

Group B (6 P)

a. Gas Welding practice on mild steel flat/sheet (upto 3mm thick)

b. Lap joint by Gas Welding (upto 3mm thick)

c. Manual Metal Arc Welding practice (upto 5mm thick)

d. Square butt joint by MMA Welding
e. Lap joint by MMA Welding

**Group C**

Fittings work: Sawing and Finishing by Filing. (6 P)

**Group D**

a. Jobs on lathe with turning, facing, chamfering and parting operations (6 P)

b. Job on shaper and milling machine for finishing two sides of a job (6 P)

c. Drilling of holes of size 5 and 12 mm diameters on the jobs / External threads making by dies, Tap size drill hole/ hand tapping operations

**Group E**

Smithy - making simple products on sheet metal (6 P)

**Course Outcomes (COs)**

CO1. Define, describe and determine the types and nature of the physical parameters like cutting speed, feed, depth of cut etc applied on mechanical manufacturing systems.

CO2. Classify and explain the effects of the above physical parameters as applied on mechanical manufacturing systems for proper comprehension.

CO3. Train the students in metal joining process like welding, soldering, etc

CO4. Impart skill in fabricating simple components using sheet metal

CO5. Cultivate safety aspects in handling of tools and equipment

CO6. Develop the collective skill and potentiality and leadership quality to work in a group or team.

**Learning Resources**

Haldia Institute of Technology  
(An Autonomous Institution Under Maulana Abul Kalam Azad University Of Technology, West Bengal)  
Syllabus for B. Tech in Mechanical Engineering  
(Applicable from the academic session 2020-2021)

<table>

<th>Category: Engineering Science Course</th>
</tr>
</thead>
<tbody>
<tr>
<td>L-T-P: 1-0-3</td>
<td>Credit: 1.5</td>
</tr>
</tbody>
</table>

Periods: 42P

Course Objectives

- To teach students to communicate using graphic techniques.
- To accomplish the principles and standards of mechanical drawing and dimensioning.

[Sessional work should be completed in the class. Problems sheet will be provided. Students should attempt to solve the problems given in the Problem Sheet. Home assignments will be given. Evaluation will be made on the basis of seasonal work and viva-voce examination.]

Scales (3P)

Plain scales, Diagonal scales, Vernier scales

Geometrical Construction and Curves (3P)

Conic Section: Parabola, Hyparabola, Ellipse

Projection of Points, Lines, Surfaces (9P)

Orthographic Projection – First angle and third angle projection More no. of problems should be practiced in first angle projection. Projection of lines inclined to the planes Projection of surfaces Pentagon, Hexagon

Projection of Solids (12P)

Cube, Pyramid, Prism, Cylinder, Cone, Frustums

Isometric View And Isometric Projection (6 P)

(Prism, Pyramid, Cylinder, Cone and examples of simple solid objects / models).

Sectional Views of Solids, True Shape of a Section (6 P)

Development of Surfaces (3 P)

(Cube, Prism, Cylinder, Truncated Cone)

Course Outcomes (COs)

CO1. To represent pictorially different elements and components using basic engineering drawing guidelines.

CO2. To gain significance of scaling pertinent to engineering drawing problems. The incumbents should also have knowledge about analytical curves and their relevance to understand different higher level mechanical engineering problems.

CO3. To understand the concept of projections for 1D, 2D and 3D object representation.

CO4. To develop an idea and ability to view complex interior sections of a solid object, and they will also be able to analyze and explain how different surfaces are generated when a solid object is cut along a plane and its surfaces are stretched out.

CO5. To draw isometric to orthographic views and vice versa.

CO6. To apply the comprehensive knowledge by using a suitable computer aided drafting package.
Learning Resources

6. Corresponding set of CAD Software Theory and User Manuals

**Periods:** 22P

**Course Objectives**

- To provide advanced skills of Technical Communication in English through various activities performed in the Language Lab Practice Sessions to 1st Semester U.G. students of Engineering and Technology.
- To instil confidence in them so that they can competently communicate in English language in all spheres.
- To make them efficient enough to communicate about day-to-day events and experiences of life, comprehend lectures delivered in English, read and understand relevant materials written in English and also to write grammatically correct English.
- To make them capable of shedding their fear of communication and public speaking.

**List of Experiments**

1. Developing active ‘Listening Skill’ and its sub skills through Language Lab Audio device; (Listening to conversations, passages, stories, news bulletin, speeches by famous personalities – Listening for general and specific information etc.,) (3P)

2. Developing ‘Speaking Skill’ and its sub skills; (Interpersonal Communication, Oral Presentations — Debate — Extempore — Speech Presentation — Conversational Practice — Face to Face / Telephonic Conversation ) (5P)

3. Developing ‘Reading Skills’ and its sub skills through reading excerpts from plays, poetry, news and various technical/non technical passages using Visual / Graphics/Diagrams /Chart Display etc. and using Literary text(s): The Homecoming by Rabindranath Tagore We’re Not Afraid to Die... if We’re Together by Gordon Cook and Alan East(4P)

4. Developing ‘Writing Skill’ and its sub skills by using Language Lab Audio — Visual input; Practice Sessions (Analytical essay writing, dialogue writing, story writing, etc.) (3P)

5. Pronunciation: Basic Rules (with emphasis on Accent Neutralisation) Organs of Speech (2P)

6. Introducing ‘Group Discussion’ through audio — Visual input and acquainting them with key strategies for success; GD practice sessions (unstructured and structured) (4P)

7. SWOT analysis (1P)

**Learning Resources**

2. Dr. D. Sadharani: Manual for English Language Laboratory. Pearson Education (WB edition), 2010
Course Outcome (COs)

CO1. Improving comprehension ability in English & understanding the mechanism of interpretation through language learning.

CO2. Honing conversation skills by learning to substantiate conclusions in grammatically correct English.

CO4. Learning effective, real life communication skills in English through several language lab activities pertaining to the four basic skills of LSRW.

CO5. Learning basic soft skills and leadership qualities.

CO6. Engaging the learner in a positive and imaginative environment to hone socio-cultural, ethical and moral skills.

Periods: 24P

Course Objectives

- To create awareness for women’s education, old age education saving of girl child. Medical issue-blood donation and Thalassemia test.
- To realize, synthesize, and evaluate their personal readiness for leadership by group work, communicating effectively and to overcome & eliminate different constraints those may arises in their academic and daily life.

1. Creating Awareness in Social Issues
   Blood Donation Camp, Road Safety Awareness, Poster Competition (Saving of Girl child, saving of water and fuel for future, Pollution and control, Global warming, Equal education for girls), Thalassemia awareness Programme, Eye Check-Up Camp.

2. Participating in Mass-Education Programme
   a. Poster Presentation on Education for All
   b. Eloaction competition, SA writing on education for all
   c. National Education Day celebration (11th Nov)

3. Proposal for Local Slum Area Development
   a. Road and Costal Side Cleaning Programme
   b. Local Hospital Area Cleaning Programme (with collaboration Haldia Minicipality)
   c. Campus Cleaning Programme

4. Environmental Awareness Programme
   a. Resource Conversation (By Poster Competition)
      i. Water
      ii. Energy
   b. Poster Competition on Global warming
   c. Plantation Programme (5th September)
   d. Fire Safety Awareness Programme (With Haldia Fire Station)

5. Relief and Rehabilitation work during Natural Calamities

Course Outcomes (COs)

CO1. To Create awareness for women’s education, old age education saving of girl child. Medical issue-blood donation and Thalassemia test.

CO2. To Realize, synthesize, and evaluate their personal readiness for leadership by group work, communicating effectively and to overcome & eliminate different constraints those may arises in their academic and daily life.

CO3. To Define and correlate different kind of social, cultural and ethical issue in light of saving of girl child, women education, saving of fuel. Manifest an ethics and service to the nation as a fundamental duty by organizing seminar symposia, work shop, essay writing, poster presentation etc.

CO4. To Apply problem solving skills by taking on volunteer and community service in their professional and social life and show interest to think about eco-friendly projects for the betterment of the society.

CO5. To Recognize the importance of civic engagement and community activism through volunteerism, community and campus service, team projects.

CO6. To Realizing his/her importance and duty, feel interest about ethical awareness and impact in the field of environmental, social and safety of the finished products.

Subject Code : HM-HU 301  
Category : Humanities and Social Sciences including Management Courses

Subject Name : Economics for Engineers  
Semester : Third

L-T-P : 2-0-0  
Credit : 2

Pre-Requisites : Nil

Course Objective:
1. To make general awareness among budding engineers regarding basic principles of economics and that needed to use in an industry.
2. To give basic understanding of engineering costs, estimation, depreciation analysis and basic accounting principles.

Course Content:

<table>

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Understand the basic concepts and terminology used in engineering economics.
2. Use the concepts of cash flows, time value of money in evaluation of investments and projects in real life.
3. Able to compare and evaluate alternatives based on present, annual, rate of return, and benefit over cost analyses.
4. Identify and analyse the impact of depreciation, taxation and other economic factors on feasibility of real life projects.
5. Recognize the economic impact of engineering solutions and Conduct sensitivity analysis on key compounding parameters, so as make financially prudent decisions in everyday life.
6. Understand major principles of economic analysis for decision making among alternative courses of action in engineering.
Learning Resources:
Objectives:

1. To introduce the solution methodologies for second order Partial Differential Equations with applications in engineering

2. To provide an overview of probability and statistics to engineers

Course Content:

<td>36</td>
</tr>
</tbody>
</table>

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Solve field problems in engineering involving PDEs.
2. Formulate the solved problems involving random variables and apply statistical methods for analysing experimental data.
3. Analyze and solve engineering problems using Laplace Series.
4. Solve engineering problems using Complex Integration.
5. Know the basic properties of the Fourier transform, and how to use it to solve linear constant coefficient PDE's.
6. Utilize technology tools to find geometric, graphical and (optionally) numeric techniques for the analysis of solutions in engineering problems.

**Total** 36
Course Outcomes:
Upon successful completion of the course, students will be able to

1. Define, describe and determine the types and nature of the physical parameters like force, moment, energy, work, stress and strain etc applied on mechanical systems.
2. Classify and explain the effects of the above physical parameters as applied on mechanical systems for proper comprehension.
3. Establish a proper understanding of the fundamental concepts of mechanics of rigid and deformable solids, including static and dynamic equilibrium, geometry of motion and deformation, and material constitutive behavior.
4. Solve complex engineering problems in solid mechanics in a systematic manner.
5. Demonstrate the physical parameters in real life situations and compute the available data and solve the practical mechanical problems.
6. Draw diagrams involving various physical parameters for proper illustration and analysis of physical parameters and available data for proper solution of practical mechanical problems.

Text/Reference Books:

6. Hibler and Gupta (2010), Engineering Mechanics (Statics, Dynamics) by Pearson Education
Syllabus for B. Tech in Mechanical Engineering
(Applicable from the academic session 2020-2021)

Subject Code : PC-ME 301  
Category: Professional Core courses

Subject Name : Thermodynamics  
Semester : Third

L-T-P : 3-0-0  
Credit:3

Pre-Requisites: Class XI physics

Course Objective:
1. To learn about work and heat interactions, and balance of energy between system and its surroundings
2. To learn about application of I law to various energy conversion devices
3. To evaluate the changes in properties of substances in various processes
4. To understand the difference between high grade and low grade energies and II law limitations on energy conversion.

Course Content:

</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Fundamentals - System &amp; Control volume; Property, State &amp; Process; Exact &amp; Inexact differentials; Work-Thermodynamic definition of work; examples; Displacement work; Path dependence of displacement work and illustrations for simple processes; electrical, magnetic, gravitational, spring and shaft work.</td>
<td>5</td>
</tr>
<tr>
<td>2</td>
<td>Temperature, Definition of thermal equilibrium and Zeroth law; Temperature scales; Various Thermometers- Definition of heat; examples of heat/work interaction in systems- First Law for Cyclic &amp; Non-cyclic processes; Concept of total energy E ; Demonstration that E is a property; Various modes of energy, Internal energy and Enthalpy.</td>
<td>5</td>
</tr>
<tr>
<td>3</td>
<td>Definition of Pure substance, Ideal Gases and ideal gas mixtures, Real gases and real gas mixtures, Compressibility charts- Properties of two phase systems - Const. temperature and Const. pressure; heating of water; Definitions of saturated states; P-v-T surface; Use of steam tables and R134a tables; Saturation tables; Superheated tables; Identification of states &amp; determination of properties, Mollier’s chart.</td>
<td>7</td>
</tr>
<tr>
<td>4</td>
<td>First Law for Flow Processes - Derivation of general energy equation for a control volume; Steady state steady flow processes including throttling; Examples of steady flow devices; Unsteady processes; examples of steady and unsteady I law applications for system and control volume.</td>
<td>4</td>
</tr>
<tr>
<td>5</td>
<td>Second law - Definitions of direct and reverse heat engines; Definitions of thermal efficiency and COP; Kelvin-Planck and Clausius statements; Definition of reversible process; Internal and external irreversibility; Carnot cycle; Absolute temperature scale.</td>
<td>5</td>
</tr>
<tr>
<td>6</td>
<td>Clausius inequality; Definition of entropy S ; Demonstration that entropy S is a property; Evaluation of S for solids, liquids, ideal gases and ideal gas mixtures undergoing various processes; Determination of s from steam tables- Principle of increase of entropy; Illustration of processes in Ts coordinates; Definition of Isentropic efficiency for compressors, turbines and nozzles- Irreversibility and Availability, Availability function for systems and Control volumes undergoing different processes, Lost work. Second law analysis for a control volume.Exergy balance equation and Exergy analysis.</td>
<td>6</td>
</tr>
<tr>
<td>7</td>
<td>Thermodynamic cycles - Basic Rankine cycle; Basic Brayton cycle; Basic vapor compression cycle and comparison with Carnot cycle.</td>

</table>

Course Outcomes:
Upon successful completion of the course, students will be able to

1. Apply the knowledge of mathematics, science and engineering fundamentals to model the energy conversion phenomenon.
2. Identify and formulate power production based on the fundamentals laws of thermal engineering.
3. Instil upon to envisage appropriate experiments related to heat engines.
4. Investigate the effectiveness of energy conversion process in mechanical power generation for the benefit of mankind.
5. Appreciate concepts learnt in fundamentals laws of thermodynamics from which learning ideas how to sustain in energy crisis and think beyond curriculum in the field of alternative and renewable sources of energy.
6. Communicate effectively the concepts of internal combustion engines and try to think beyond curriculum in alternative sources of energy.

Learning Resources:
Subject Code : PC-ME 302  
Subject Name : Fluid Mechanics  
Category: Professional Core courses  
L-T-P : 3-1-0  
Credit: 4  
Pre-Requisites: Class XI physics

Course Objective:
1. To learn about the application of mass and momentum conservation laws for fluid flows
2. To understand the importance of dimensional analysis
3. To obtain the velocity and pressure variations in various types of simple flows
4. To analyze the flow in water pumps and turbines.

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Understand the basic concept of fluid flow and properties of fluids.
2. Understand the principles of fluid statics, kinematics and dynamics.
3. Analyze fluid flow problems with the application of the momentum and energy equations.
4. Understand concept of buoyancy, viscosity and importance of viscosity in real flows.
5. Perform dimensional analysis for problems in fluid mechanics.
6. Understand the concept of boundary layer formation.

Learning Resources:
3. Introduction to Fluid Mechanics & Fluid Machines, Som and Biswas, TMH.
Course Objective:
1. Understanding of the correlation between the internal structure of materials, their mechanical properties and various methods to quantify their mechanical integrity and failure criteria.
2. To provide a detailed interpretation of equilibrium phase diagrams
3. Learning about different phases and heat treatment methods to tailor the properties of Fe-C alloys.

Course Content:

Course Outcomes:
Upon successful completion of the course, students will be able to

1. Student will be able to identify crystal structures for various materials and understand the defects in such structures.
2. Understand how to tailor material properties of ferrous and non-ferrous alloys.
3. Identify the properties of metals with respect to crystal structure and grain size.
4. Interpret the phase diagrams of materials.
5. Classify and Distinguish different types of cast irons, steels and non ferrous alloys.
6. Describe the concept of heat treatment of steels & strengthening mechanisms.
Learning Resources:

Subject Code : PC-ME 391  
Category: Professional Core courses
Subject Name : Fluid Mechanics Lab  
Semester : Third
L-T-P : 0-0-3  
Credit: 1.5
Pre-Requisites: Fluid Mechanics (PC-ME 302)

Course Objective:
1. To Enrich the concept of fluid mechanics and hydraulic machines.
2. To Demonstrate the classical experiments in fluid mechanics and hydraulic machinery.
3. To Correlate various flow measuring devices such as Venturimeter, orifice meter and notches etc.
4. To Discuss the performance characteristics of turbines and pumps.

Course Content:

Fluid flow measurements: Determining coefficient of discharge for venture meter, orifice meter, weirs; Experiment to verify Bernoulli's theorem;
Flow through pipes: Reynold's experiments; Pipe friction in laminar and turbulent flow regimes; Pitot tube experiments on viscous flow and boundary layer theory; Determination of metacentric height of a floating vessel;
Experiments on Fluid Machinery: Pumps, jet pumps, Blowers, Compressors; Experiments on Hydro-Turbines: Francis and Pelton turbines.

(At least six experiments must be conducted)

Course Outcomes:
Upon successful completion of the course, students will be able to

1. Understand of basic physics of fluids.
2. Apply knowledge to calculate and design engineering applications involving fluid.
3. Understand the flow systems in terms of mass, momentum, and energy balance.
4. Acquire knowledge about current research topics about fluid mechanics.
5. Understand to analyze practical problems in all power plants and chemical industries
6. Conduct experiments (in teams) in pipe flows and open-channel flows and interpreting data from model studies to prototype cases, as well as documenting them in engineering reports.
7. Subject Code : PC-ME 392  
Subject Name : Material Testing Lab  
L-T-P: 0-0-3  
Pre-Requisites: Material Science (PC-ME 303)

Category: Professional Core courses  
Semester : Third  
Credit:1.5

Course Objective:
1. To test several properties of material like ductility, surface roughness, malleability, hardenability etc.
2. To function on multi-disciplinary teams in the area of materials testing.
3. To use the techniques, skills and modern engineering tools necessary for engineering.
4. To understand the professional and ethical responsibility in the areas of material testing.

Course Content:
Impact tests: Charpy and Izod tests.
Test for drawability of sheet metals through cupping test.
Fatigue test of a typical sample.
Sample preparation and etching of ferrous and non-ferrous metals and alloys for metallographic observation.
Experiments on heat treatment of carbon steels under different rates of cooling including quenching, and testing for the change in hardness and observing its microstructural changes through metallographic studies.
Observation of presence of surface/ sub-surface cracks using different non-destructive techniques, such as dye penetration (DP) test, magnaflux test, ultrasonic or eddy current test.

(At least six experiments must be conducted)

Course Outcomes:
Upon successful completion of the course, students will be able to

1. Determine toughness value of industrial specimens.
2. Analyze various heat treatment methods for a given specimen to observe mechanical properties and grain size.
3. Find surface or subsurface defects relevant to almost all manufacturing industries.
4. Evaluate the mechanical properties like drawability, endurance limit of a steel specimen necessary for material selection in design and development.
5. Apply knowledge of mathematics and engineering in calculating the mechanical properties of structural materials.
6. Able to communicate effectively the mechanical properties of materials.
Subject Code : PC-ME 393
Subject Name : Machine Drawing
Category: Professional Core courses
Semester : Third
L-T-P: 0-0-3
Credit: 1.5
Pre-Requisites: Engineering Drawing (ES-ME 292)

Course Objective:

1. Provide the fundamental concepts of machine drawing elaborating on how to concretize the idea of new structure such as a machine element.
2. Study the conventions and rules to be followed by engineers for making accurate drawings.
3. Understand the basic dimensioning practices that have to be followed in the preparation of drawings.
4. Help the student in the visualization of assembly and sub assembly of various machine elements.
5. Train the students in the preparation of assembly drawings

Course Content:

Schematic product symbols for standard components in mechanical, electrical and electronic systems, welding symbols and pipe joints; Orthographic projections of machine elements, different sectional views-full, auxiliary sections; Isometric projection of components; Assembly and detailed drawings of a mechanical assembly, such as a plummer block, tool head of a shaping machine, tailstock of a lathe, simple gear box, flange coupling, welded bracket joined by stud bolt on to a structure, welded pipe joints indicating work parts before welding, etc.

Practicing AutoCAD or similar graphics softwares and making orthographic and isometric projections of different components.

(At least six assignments must be completed)

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Gain knowledge about the various practices with regard to the dimensioning, sectioning and development of views.
2. Understand product symbols for standard components in mechanical, electrical and electronic systems and joints.
3. Understand the sectional views of machine parts and the assembly drawing of mechanical components.
4. Prepare of the part or assembly drawings as per the conventions.
5. Interprete machine drawings that in turn help the students in the preparation of the production drawings.

**NOTE:** Vocational Training/Internship to be conducted after fourth semester and to be evaluated in fifth semester.
Course Objective:
1. To understand the concept of stress and strain.
2. To evaluate the nature of stress developed in various geometries such as bars, cantilevers, beams, shafts, cylinders, spheres under various types of simple load.
3. To facilitate the concept of bending and its theoretical analysis.
4. To calculate elastic deformation occurring in various simple geometries for different types of loading.
5. To understand the concept of column and critical load in different boundary conditions.
6. To calculate the stresses in pressure vessels.

Course Outcomes:
Upon successful completion of the course, students will be able to

1. Understand the need, history for the development of new concepts with metrology and measurement.
2. Know different instruments those are available for linear, angular, roundness and roughness measurements.
3. Get the idea about appropriate method for determination of accuracy based on product function and manufacturing capability, sustainability, and environmental constraints.
4. Identify the role of Sensors and Transducers in the process of Measurement and instrumentation.
5. Function on Quality control and quality assurances divisions in industries.
6. Apply critical and analytical thinking skills in problem solving situations in real life.

Learning Resources:

### Course Objectives:

1. The student will be able to know the capability of selecting suitable manufacturing processes to manufacture the products optimally.
2. The student will be able to recommend the appropriate design of gating systems, forming processes, welding process and NDT technique.
3. The student will be able to develop simplified manufacturing processes with the aim of reduction of cost and manpower.
4. The student will be able to identify/control the appropriate process parameters, and possible defects of manufacturing processes so as to remove them.

| 6         | Solid state welding
Principles, advantages & applications of: Hot forge welding, Friction welding Pressure & percussion welding.
**Precision welding processes:** Ultrasonic welding Laser beam welding Electron beam welding. | 3           |
### Course Outcomes:

**Upon successful completion of the course, students will be able to**

1. Select appropriate Manufacturing Processing to manufacture any component.
2. Interpret foundry practices like pattern making, mold making, Core making and Inspection of defects.
3. Differentiate various metal forming processes such as Hot and Cold Working, Rolling, Forging, Extrusion and Drawing Processes.
5. Select appropriate Joining Processes to join Work piece.
6. Implement the Knowledge of Gained Subject in Industry.

### Learning Resources:

8. Introduction to manufacturing technology-PP Date, Pub: Jaico.

Course Objectives:

1. To understand the kinematics and rigid-body dynamics of kinematically driven machine components.
2. To understand the motion of linked mechanisms in terms of the displacement, velocity and acceleration at any point in a rigid link.
3. To be able to design some linkage mechanisms and cam systems to generate specified output motion.
4. To understand the kinematics of gear trains.

Course Outcomes

After successful completion of the course, students will be able to:

1. Define different terminologies of linkages, kinematic pairs, kinematic chains and mechanisms and power transmission systems, describe the working mechanism of different linkages, kinematic pairs,
kinematic chains and mechanisms and determine the velocity, acceleration, force, power required etc. for different linkages, joints, mechanisms and power transmitting devices.

2. Classify and explain different types of linkages, kinematic pairs, kinematic chains, mechanisms and power transmission systems.

3. Establish a proper understanding of kinematics and kinetics of different linkages, kinematic pairs, kinematic chains, mechanisms and power transmission systems.

4. Solve complex engineering problems addressing velocity, acceleration, force and power transmitted for different linkages, kinematic chains, mechanisms and power transmission systems.

5. Demonstrate the working mechanisms of different linkages, kinematic pairs, kinematic chains, mechanisms and power transmission systems and analyze their performances by developing mathematical models.

6. Draw schematic diagrams, velocity diagrams and acceleration diagrams of different linkages, kinematic pairs, kinematic chains, mechanisms and power transmission systems and perform dimensional synthesis of the above systems.

**Learning Resources:**
1. Elements of Mechanism – Daughtly and James, McGraw Hill
2. Theory of Machines – S S Rattan, Tata McGraw Hill
6. Theory of Machines, V.P.Singh, Dhanpat Rai & Co
Subject Code : PC-ME 491 | Category: Professional Core courses
Sub-Subject Name: Strength of Materials Lab | Semester: Fourth
L-T-P: 0-0-3 | Credit: 1.5
Contact Per Week- 3P | Contact Week / Semester=12 minimum
Pre-Requisites: Strength of Materials (PC-ME 401)

Course Objectives:
1. To demonstrate the basic principles in the area of strength and mechanics of materials.
2. To measure the properties of the materials such as impact strength, tensile strength, compressive strength, hardness, ductility etc.
3. To understand the deformation behavior of materials

Course Contents:
1. Verification of Varignon's theorem
2. Experiments on friction: determination of coefficient of friction
4. Determining spring stiffness under tension and compressive loads.
5. Strain gauge-based strain/ deflection/ force measurement of a cantilever beam.
6. Bend and re-bend test of flat test pieces, determination of bending stresses.
7. Torsion Test on a mild steel rod.

(At least 6 (six) experiments must be conducted)

Course Outcomes:

Upon successful completion of the course, students will be able to
1. Design and conduct experiments, acquire data, analyze and interpret data.
2. Understand the behavior of structural elements such as bars, beams, and columns subjected to tension, compression, shear, bending, and torsion by means of experiments.
3. Physical insight into the behavior of materials and structural elements including distribution of stress and strain, deformation, and failure modes.
4. Deformation of spring stiffness and able to design spring as per required strength.
5. Find the hardness of various materials.
6. Write individual and group reports on present objectives, describe test procedures and results, synthesize and discuss the test results, present conclusions.
Haldia Institute of Technology  
(An Autonomous Institution Under Maulana Abul Kalam Azad University Of Technology, West Bengal) 
Syllabus for B. Tech in Mechanical Engineering  
(Applicable from the academic session 2020-2021)

Subject Code : PC-ME 492  
Category: Professional Core courses

Subject Name : Theory of Machines Lab  
L-T-P : 0-0-3  
Credit: 1.5

Contact Per Week- 3P  
Contact Week / Semester=12 minimum

Pre-Requisites: Theory of Machines (PC-ME 405)

Course Objectives:
1. To determine the balancing of masses of rotating and reciprocating machine elements.
2. To understand the principles of gyroscope and governors.
3. To study working of brakes and dynamometer.
4. To determine the moment of inertia of various mechanical systems.
5. To understand the vibrational behavior of systems.

Course Contents:
1. To study the compound pendulum and to determine the radius of gyration of the same
2. Determination of radius of gyration of a bar using bi-fillar suspension.
3. Study of equivalent spring mass system and determination of the natural frequency of undamped free vibration of equivalent spring mass system.
4. Determination of the natural frequency of undamped torsional vibration of single rotor shaft system.
5. Determination of the natural frequency of undamped torsional vibration of double rotor shaft system.
7. To study the operational features and be familiar with different characteristics curves of Porter Governor.
8. To study the operational features and be familiar with different characteristics curves of Proell Governor.
9. To study the behaviour of cam follower mechanism and to draw cam profiles from displacement of the follower.

(At least 6 (six) experiments must be conducted)

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Identify the subsystems and components of different machines and mechanisms.
2. Explain the operating principles of different machines and mechanisms and sketch the schematic diagram of those machines and mechanisms.
3. Derive the relation between the operating parameters of the machines and the outputs from the machines.
4. Perform experimental studies on different mechanisms and machines.
5. Analyze and interpret the experimental results.
6. Write a laboratory report and work in a team.
Subject Code: PC-ME 493

Pre-Requisites: Material Science (PC-ME 303), Manufacturing Processes (PC-ME 404)

Course Objectives:

1. The student will be having the capability of selecting suitable manufacturing processes to manufacture the products optimally.
2. The student will be able to recommend the appropriate design of gating systems, forming processes, welding process.
3. The student will be able to develop simplified manufacturing processes with the aim of reduction of cost and manpower.
4. The student will be able to identify/control the appropriate process parameters, and possible defects of manufacturing processes so as to remove them.

Course Contents:

1. Sand preparation and testing: specimen preparation for testing permeability, clay content, grain fineness number, moisture content, green compression strength, green shear strength, splitting strength, hardness, etc.;
2. Preparation of foundry sand and molds,
3. Casting of metals after preparation of suitable moulds;
4. Experiments on properties of post casting, fettling, cleaning, deburring, and polishing operations;
5. Practicing smithy or forging of carbon steels and testing for its property changes;
6. Laboratory experiments in Fabrication processes to observe effects of varying process parameters in GMAW and SMAW and GTAW.

(At least 6 (six) experiments must be conducted)

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Build practical knowledge about Pattern Making; pattern material, pattern allowances and types of patterns casting processes.
2. Apply practical understanding for use of moulding tools: green sand moulding, gating system, risering system, core making.
3. Plan and create jobs using forging processes.
4. Understand and plan for machining of gears
5. Relate the job manufactured from practical relevance point of view
6. Prepare a sheet metal Job.
Subject Code : PC-ME 494                                  Category: Professional Core courses
Subject Name : Metrology and Measurement lab             Semester : Fourth
L-T-P : 0-0-3                                          Credit:1.5
Contact Per Week- 3P                                   Contact Week / Semester=12 minimum
Pre-Requisites: Metrology & Measurement (PC-ME 403)

Course Objectives:

1. To learn the main principle on which different instruments operate and provide hands on experience on them.
2. To generate knowledge and skill in use of precision instruments.
3. To learn a basic understanding of various instruments used in linear and angular

Course Contents:

1. Study of Micrometer and Measurement of dimension of combined slip gauges.
3. Measurement of internal taper angle of a taper object.
5. Linear Measurement using Vernier height gauge and micrometer (internal and external depth).
7. Measurement of taper angle of a given work piece by bevel protector and sine bar (using balls and rollers).
11. Checking / measuring parallelism, cylindricity and concentricity of components using dial indicator.
12. Measuring flatness with light band readings by using monochromatic light source.

(At least 6 (six) experiments must be conducted)

Course Outcomes:

Upon successful completion of the course, student will have

1. Student will be able to demonstrate the knowledge/skill on standards, calibration process and analyze the characteristics of instruments keeping in mind technical, economical, safety issues.
2. Student will be able to demonstrate the knowledge/skill on measurement of length, angle and form surface measurement
3. Set up testing strategies and select proper instruments to evaluate performance characteristics
4. Evaluate possible causes of discrepancy in practical experimental observations in comparison to theory
5. Primarily via team-based laboratory activities, students will demonstrate the ability to interact effectively on a social and interpersonal level with fellow students, and will demonstrate the ability to divide up and share task responsibilities to complete assignments.
6. Prepare professional quality textual and graphical presentations of laboratory data and computational results

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Understand the use of numerical methods in scientific computing.
2. Calculate and interpret the errors in numerical methods.
3. Apply the concept of numerical interpolation and approximation of functions.
4. Solve numerical integration and differentiation.
5. Solve numerical solution of ordinary differential equations.
6. Formulate algorithms and programming.

Learning Resources:
8. Soumen Guha & Rajesh Srivastava: Numerical Methods, OUP.
Subject Code: PC-ME 501  
Category: Professional Core courses

Subject Name: Heat Transfer  
Semester: Fifth

L-T-P: 3-0-0  
Credit: 3

Contact Per Week: 3L  
Contact Week / Semester=12 minimum

Pre-Requisites: Thermodynamics (PC-ME 301)

Course Objective:
1. To build a solid foundation in heat transfer exposing students to the three basic modes namely conduction, convection and radiation.
2. Rigorous treatment of governing equations and solution procedures for the three modes will be provided, along with solution of practical problems using empirical correlations.
3. The course will also briefly cover boiling and condensation heat transfer, and the analysis and design of heat exchangers.

</tbody>
</table>

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Explain the laws of heat transfer and deduce the general heat conduction equation and to explain it for 1-D steady state heat transfer in regular shape bodies, Interpret the extended surfaces.
2. Describe the critical radius of insulation, overall heat transfer coefficient, thermal conductivity and lumped heat transfer.
3. Illustrate the boundary layer concept, dimensional analysis, forced and free convection under different conditions
4. Explain the thermal radiation black body, emissivity and reflectivity and evaluation of view factor and radiation shields
5. Evaluate the heat exchanger and examine the LMTD and NTU methods applied to engineering problems.
6. Describe the Boiling heat transfer, mass transfer.

Pre-Requisites: Manufacturing Processes (PC-ME 404)

Course Objective:
1. The course provides students with fundamental knowledge and principles in material removal processes.
2. In this course, the students apply the fundamentals and principles of metal cutting to practical applications through multiple labs using lathes, milling machines, grinding machines, and drill presses etc.
3. To demonstrate the fundamentals of machining processes and machine tools.
4. To develop knowledge and importance of metal cutting parameters.
5. To develop fundamental knowledge on tool materials, cutting fluids and tool wear mechanisms.
6. To apply knowledge of basic mathematics to calculate the machining parameters for different machining processes.

Course Outcomes:

Upon successful completion of the course, students will be able to
1. Develop ability to utilizing knowledge of mathematics, science and engineering outcomes.
2. Explain the fundamentals of stress analysis, theories of failure and material science in the design of machine components.
3. Make proper assumptions with respect to material, factor of safety, static and dynamic loads for various machine components.
4. Develop an ability to design a system, component or process to meet desired needs within realistic constraints.
5. Use the techniques, skills and modern engineering tools necessary for engineering practice.
6. Develop an ability to identify, formulate and solve engineering problems.

**Learning Resources:**

1. V. B. Bhandari, Design of Machine Elements, TMH.
2. Shigley and Mischke, Mechanical Engineering Design, TMH.
Subject Code: PC-ME 504  
Subject Name: IC Engines  
Category: Professional Core courses  
L-T-P: 3-0-0  
Credit: 3  
Semester: Fifth  
Contact Per Week: 3L  
Contact Week / Semester: 12 minimum  
Pre-Requisites: Thermodynamics (PC-ME 301), Applied Thermodynamics (PC-ME 402)

Course Objective:
1. To acquire knowledge about the IC engine cycles, classification, working principles and to measure performance parameters along with heat balance sheet.
2. To explain different alternate fuels, gas turbines and about jet propulsion

Course Content:

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Explain basic concepts of actual cycles with analysis and to describe the fundamental concepts of IC engines along with its working principles.
2. Interpret different alternative fuels and its emissions, then the method to control these emissions.
3. Analyze different electronic fuel injection system, supercharging and its effect on performance of SI and CI engine.
4. Explain performance parameters and characteristics; and calculation of performance parameters.
5. Explain Brayton cycle and Classified the essential components of gas turbine along with its performance improving methods.
6. Illustrate the working principle of different types of Jet propulsive engines and Rockets.

</tbody>
</table>

Total 24

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Understand the concept of Traditional knowledge and its importance.
2. Explain the need and importance of protecting traditional knowledge.
3. Illustrate the various enactments related to the protection of traditional knowledge.
4. Interpret the concepts of Intellectual property to protect the traditional knowledge.
5. Explain the importance of Traditional knowledge in Agriculture and Medicine.

Learning Resources:
Subject Code: CS-ME 591
Subject Name: Computer Programming Lab
Category: Professional Core courses
Semester: Fifth
L-T-P: 0-0-3
Contact Per Week: 3P
Credit: 1.5
Contact Week / Semester: 12 minimum
Pre-Requisites: Numerical Methods & Computer Programming (CS-ME 501)

Course Objective:
To explore complex systems, physicists, engineers, financiers and mathematicians require computational methods since mathematical models are only rarely solvable algebraically. Numerical methods, based upon sound computational mathematics, are the basic algorithms underpinning computer predictions in modern systems science. The course will cover the classical fundamental topics in numerical methods such as, approximation, numerical integration, numerical linear algebra, solution of nonlinear algebraic systems and solution of ordinary differential equations.

Course Content:
1. Interpolation: Problems on Newton forward and Backward interpolation, Lagrange’s Interpolation.

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Demonstrate understanding of common numerical methods and how they are used to obtain approximate solutions to otherwise intractable mathematical problems.
2. Apply numerical methods to obtain approximate solutions to mathematical problems.
3. Derive numerical methods for various mathematical operations and tasks, such as interpolation, differentiation, integration, the solution of linear and nonlinear equations, and the solution of differential equations.
4. Analyse and evaluate the accuracy of common numerical methods.
5. Implement numerical methods in Matlab.
6. Write efficient, well-documented Matlab code and present numerical results in an informative way.
Subject Code : PC-ME 591  
Subject Name : Machine Tools Lab  
L-T-P : 0-0-3  
Contact Per Week- 3P  
Pre-Requisites: Machining Principles & Machine Tools (PC-ME 502)

Course Objective:
1. The course provides students with fundamental knowledge and principles in material removal processes.
2. In this course, the students apply the fundamentals and principles of metal cutting to practical applications through multiple labs using lathes, milling machines, grinding machines, and drill presses, Computer Numerical Control etc.
3. To demonstrate the fundamentals of machining processes and machine tools.
4. To develop knowledge and importance of metal cutting parameters.
5. To develop fundamental knowledge on tool materials, cutting fluids and tool wear mechanisms.
6. To apply knowledge of basic mathematics to calculate the machining parameters for different machining processes.

Course Content:
1. Measurement of cutting forces (Pz and Px or Py ) in straight turning at different feeds and velocities.
3. Measurement of surface roughness in turning under different conditions.
4. Study of chip formation ( type, color & thickness ) in turning mild steel and evaluation of role of variation of cutting velocity and feed on chip reduction coefficient /cutting ratio and shear angle.
6. Producing a cast iron vee – block by machining.
7. Production of a straight toothed spur gear from a cast or forged disc.

(At least six experiments must be conducted)

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Evaluate the cutting forces (Pz and Px or Py ) in straight turning at different feeds and velocities.
2. Analyze the average cutting temperature in turning under different speed – feed combinations.
3. Identify chip formation mechanism and relevant matters ( type, color & thickness ) in turning mild steel and evaluate the role of variation of cutting velocity and feed on chip reduction coefficient /cutting ratio and shear angle.
4. Determine of tool – wear and evaluation and analysis of tool life in turning mild steel by HSS or carbide tool.
5. Perform Geometrical and kinematic test of a centre lathe or a drilling machine.
6. Select a machining operation and corresponding machine tool for a specific application in real time.
Subject Code : PC-ME 592  
Subject Name : Thermal Engineering Lab  
L-T-P : 3-0-0  
Contact Per Week- 3L  
Pre-Requisites: Heat Transfer (PC-ME 501), IC Engines (PC-ME 504)

Course Objective:  
At the end of the course, student will be able to know different thermal properties and will understand principles and performance of various thermal devices.

Course Content:  
1. Determination of thermal conductivity of a metal rod.  
2. Determination of thermal conductivity of an insulating powder/or an insulating plate.  
3. Determination of emissivity of a plate.  
4. Study of a shell and tube heat exchanger and determination of LMTD.  
5. Study and performance test of a single acting reciprocating air compressor.  
6. Determination of the calorific value of a given fuel and its flash & fire points.  
7. Flue gas analysis by ORSAT apparatus.  
8. Study of valve timing diagram of diesel engine.  

(At least six experiments must be conducted)

Course Outcomes:  
Upon successful completion of the course, students will be able to  
1. Apply the knowledge of mathematics, science and engineering fundamentals to model the energy conversion.  
2. Evaluate by experiment the water equivalent of a bomb calorimeter and thereby calculate the calorific value of any unknown fuel.  
3. Evaluate the exhaust smoke and exhaust emission by ORSAT Apparatus and understand the preventive measures.  
4. Perform test in a single cylinder diesel engine and determine the performance parameters like fuel consumption, BP, Fuel efficiency, air consumption.  
5. Determine the performance parameters of a multi cylinder petrol engine and also perform the morse test to evaluate the power of an individual cylinder.  
6. Understand the different parts and working of different types boiler.

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Understand various refrigeration cycles and evaluate performance using Mollier charts and/or refrigerant property tables.
2. Illustrate the fundamental principles and applications of refrigeration and air conditioning system.
3. Conduct test on vapor compression refrigeration systems to obtain cooling capacity and coefficient of performance.
4. Estimate the condition of steam and performance of vapour power cycle and vapour compression cycle.
5. Determine cooling load for air conditioning systems used for various applications
6. Apply the concept of psychometric charts and estimate various essential properties related to Psychrometry and processes.

Electron Beam Machining - Equipment for production of Electron Beam, theory of EBM, thermal and non-thermal type, process characteristics and applications.

Ion Beam Machining - Mechanism of metal removal and associated equipment, process characteristics and applications.

Plasma Arc Machining: Basic principle, Metal removal mechanism, process parameters, process characteristics, types of torches, applications. Applications.

Hybrid Machining- Introduction, Methodology for Hybrid machining, thermal interaction, chemical and electrochemical interaction, mechanical interaction, Electromechanical Discharge Machining (ECDM/ECAM), Electrical Discharge Machining with Ultrasonic Assistance (EDMUS).

Micro-Machining: Need- evolution- fundamentals and trends in micro technologies Consequences of the technology and society- challenges to manufacturing technology-evolution of precision in manufacturing, tooling and current scenario, requirements and applications Theory of micromachining- Chip formation- Size effect in micromachining- micro turning- micro drilling.

Total 36

Course Outcomes:
Upon successful completion of the course, students will be able to

1. Identify the background behind the development of unconventional machining processes and to understand the basic principles, equipment, merits, demerits and applications of various non-traditional machining processes.

2. Understand various material processing techniques for critical components.

3. Analyse the influence of process parameters in various non-traditional machining processes.

4. Understand various micro machining processes.

5. Understand and select various measurement techniques in micro machining processes.

6. Capture the international market with latest mechanical industry needs with the knowledge and support of advanced manufacturing techniques, so student with this judgment will be absorbed in any mechanical industry.

Learning Resources:

2. Manufacturing Engineering & Technology, K. Jain, Pearson Education

5. Non-Traditional Manufacturing by Benidict.

Subject Code: PC-ME 603
Subject Name: Machine Design
Category: Professional Core courses
L-T-P : 3-0-0
Contact Per Week- 3L
Credit: 3
Contact Week / Semester = 12 minimum

Pre-Requisites: Strength of Materials (PC-ME 401), Theory of Machines (PC-ME 405)

Course Objective:
1. Enable students to attain the basic knowledge required to understand, analyze, design and select machine elements required in transmission systems.
2. Reinforce the philosophy that real engineering design problems are open-ended and challenging.
3. Impart design skills to the students to apply these skills for the problems in real life industrial applications.
4. Inculcate an attitude of team work, critical thinking, communication, planning and scheduling through design projects.
5. Create awareness amongst students about safety, ethical, legal, and other societal constraints in execution of their design projects.
6. Develop an holistic design approach to find out pragmatic solutions to realistic domestic and industrial problems.

<td>Introduction: System concept of production; Product life cycle; Types and characteristics of different production system: Mass, Batch, Job; Productivity, Strategies to connect Sales with Production: MTS, ATO, MTO, ETO; Primary, Secondary, tertiary production systems; Process and product focused organization structures; Management decisions – strategic, tactical and operational.</td>
<td>3</td>
</tr>
<tr>
<td>2</td>
<td>Forecasting: Patterns of a time series – trend, cyclical, seasonal and irregular; Forecasting techniques: Time series: moving average, weighted moving average, simple exponential smoothing, adjusted exponential smoothing; Causal: linear regression; Forecasting a time series with trend and seasonal component; Accuracy of forecasting: MAD, MAPE, MSE, MFE; BIAS.</td>
<td>5</td>
</tr>
<tr>
<td>3</td>
<td>Materials Management and Inventory Control: Components of materials management; Inventory control: Taxonomy of inventory control, EOQ model, Economic (production) lot size model, Inventory model with planned shortages, Quantity discounts for EOQ model; Q-system and P-system of inventory control; Selective inventory: ABC analysis, FSN, VED etc; Determination of reorder point, safety stock, service level. Just-in-time inventory management, Kaizen, Kanban.</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>Materials Requirement Planning: MRP concept – bill of materials (BOM), master production schedule; capacity requirements planning, MRP calculations, MRP – II.</td>
<td>3</td>
</tr>
<tr>
<td>5</td>
<td>Machine Scheduling: Concept of Scheduling and process planning, Taxonomy of Scheduling and Scheduling attributes; Forward scheduling vs. backward scheduling, Gantt Chart; Single machine scheduling problem: Different priority rules: shortest processing time (SPT) rule to minimize mean flow time, Earliest due date (EDD) rule to minimize maximum lateness, Total tardiness minimizing model; Minimizing make span with identical parallel machines; Johnson’s rule for 2 and 3 machines scheduling; Problems of 2 jobs – m machines. Limitations of static scheduling and emergence of dynamic scheduling, Types of dynamic scheduling: (i) pure reactive scheduling, (ii) Predictive-reactive scheduling, (iii) Robust pro-active scheduling; Concept of distributed scheduling.</td>
<td>7</td>
</tr>
<tr>
<td>6</td>
<td>Assembly Line Balancing: Line balancing problem, Taxonomy of line balancing: Cycle time, task time, minimum number of stations required; Performance Measures of Line Balancing: Idle time, line efficiency, balance delay, smoothness index; Line balancing procedures: Precedence diagram, Rank positional weight method.</td>
<td>3</td>
</tr>
<tr>
<td>7</td>
<td>Project Scheduling: Activity analysis; Network construction; critical path method (CPM); Crashing of project network.</td>
<td>4</td>
</tr>
<tr>
<td>8</td>
<td>Quality Control &amp; Assurance : Meaning of Quality; Quality assurance system; choice of process and quality; Inspection and control of quality; Maintenance function &amp; quality; Process control charts : x-chart and R-chart, p-chart and c-chart; Acceptance sampling : Operating characteristic (O.C) curve, Single sampling plan, Double sampling plan, Acceptance sampling by variables and Six Sigma.; Concept and principles of TQM: Quality policy, quality plan, role of customer and people in TQM, total quality maintenance, benefits.</td>
<td>6</td>
</tr>
</tbody>
</table>

**Total** 36
Course Outcomes:
Upon successful completion of the course, students will be able to

1. Define and distinguish the different types of production system and their characteristics, types of managerial decision-making, and the role and function of different units of PPC and establish their inter-relationship, and model production system by a closed loop control system.

2. Predict (Forecast) the market and production demands by using different mathematical and statistical techniques and judge the accuracy of forecasting.

3. Define the vocabularies of inventory control system, classify inventories based on certain attributes, and determine the Economic Order Quantity (EOQ) and associated cost following different inventory models and will be able to estimate lot size for MRP systems.

4. Optimize the machine scheduling using several priority (rule) such as SPT, EDD, Critical ratio etc., solve multiple machine scheduling problems by application of Jhonson’s Algorithm and construct the Gantt chart, and able to justify and use Distributed Artificial Intelligence (DAI) techniques to realize distributed scheduling (DS).

5. Construct ‘Network (Arrow) Diagram’ and determine the ‘Critical Path’ for a project considering deterministic (CPM) and probabilistic approach (PERT) and the project cost.

6. Apply different Quality control approaches to various production systems and optimize assembly line balancing.

Learning Resources:

Haldia Institute of Technology
(An Autonomous Institution Under Maulana Abul Kalam Azad University of Technology, West Bengal)

Syllabus for B. Tech in Mechanical Engineering
(Applicable from the academic session 2020-2021)

1. To understand the different aspects of CAD/CAE/CAM and apply various techniques in the relevant areas of design and manufacturing
2. To learn and develop Flexible Manufacturing Systems
3. To understand the philosophy of CIM and apply the same for the development and implementation of CIM systems.

factory; social and economic factors. CIM implementations, Barriers to CIM.

Total 36

Course Outcomes:
Upon successful completion of the course, students will be able to

1. Establish the need of automation and its’ benefits, define, characterize and distinguish the different types of automation and automated manufacturing systems cater to different types of production strategy.
2. Outline the principles of operation of NC & CNC machine tools, their constructions, control systems used, the features of Turning centres, machining centres, and hybrid (multi-tasking) machines.
3. Design and analyse the open and closed loop control systems of NC/CNC machine tools, develop the DDA interpolation expressions (Summation formulae) for linear and circular trajectory, and analyse the DNC and adaptive control systems.
4. Able to prepare process plan for Turning centres and Machining centres and write the manual part program and for complex mechanical components.
5. Apply data management and its importance for decision making in CIMS environment.
6. Design Flexible manufacturing cell after carrying out Group technology study and finally creating FMS.

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Understand the evolution and structural composition of Indian Constitution.
2. Apply the different articles/clauses of the constitution in interpretation of complex relationship among the different organs/institutions of India.
3. Analyse union-state power distribution as a medium of decentralization in a true federal structure like India.
4. Evaluate the three organs of the state in the contemporary scenario.
5. Instil the knowledge of Indian political scenario amidst the emerging challenges in the social and economic scenario.
6. Demonstrate critical thinking in terms of diplomatic skills to create socio-economic and political stability in national scenario.

Learning Resources:
1. Indian Constitution by Durga Das Basu;
2. Indian Constitution by Vidhya Bhushan and Vishnu Bhagawan;
3. India’s Constitution by Faida;
Subject Code: PC-ME 691  
Category: Professional Core courses

Subject Name: Air-conditioning & Refrigeration Lab  
Semester: Sixth

L-T-P: 0-0-3  
Credit: 1.5

Contact Per Week- 3P  
Contact Week / Semester = 12 minimum

Pre-Requisites: Air-conditioning & Refrigeration (PC-ME 601)

Course Objective:
1. To understand the working of a vapour compression refrigeration system.
2. To understand and perform the experimentation on vapour compression refrigeration test rig.
3. To carry out the experimentation on air conditioning test rig.
4. To understand and perform the experimentation on ice plant apparatus.

Course Content:
1. Study on different component of a vapour compression refrigeration system and its working cycle.
2. Experiment on vapour compression refrigeration test rig.
3. Experiment on vapour compression refrigeration test rig with continuous flow of water.
4. Experiment on air conditioning test rig.
5. Experiment on air conditioning test rig psychrometric properties and - coil bypass factor.
6. Experiment on ice plant apparatus.

Course Outcomes:

Upon successful completion of the course, students will be able to
1. Illustrate the fundamental principles and applications of refrigeration and air conditioning system
2. Understand the calculations of for evaluating the performance of refrigeration and air conditioning system
3. Present the properties, applications and environmental issues of different refrigerants
4. Obtain coefficient of performance by conducting test on vapour compression refrigeration systems test rig with continuous flow of water.
5. Calculate cooling load for air conditioning systems
6. Operate and analyse the ice plant apparatus.
Subject Code: PC-ME 692  
Category: Professional Core courses

Subject Name: Modern Manufacturing Process Lab  
Semester: Sixth

L-T-P: 0-0-3  
Credit: 1.5

Contact Per Week- 3P  
Contact Week / Semester = 12 minimum

Pre-Requisites: Modern Manufacturing Process (PC-ME 602)

Course Objective:
1. To make acquainted the various unconventional manufacturing processes.
2. To know about the applications of advanced manufacturing processes (which are exceptional).
3. To encourage the students for developing the models (experimental/theoretical) of Advanced Manufacturing Processes.

Course Content:
1. Parametric Study of Electric-Discharge Machining Process
2. Study of Micro Electric-Discharge Machining Process
3. Study of Electro Chemical Machining Process
4. Study of CO2 Laser Cutting Process
5. Study of Abrasive Jet Machining
6. Study of Ultrasonic Machining

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Understand and recognize constructional features and modes of operations of CNC.
2. Identify different axes, machine zero, home position, systems and controls of CNC machines.
3. Create and simulate CNC turning part program and to identify errors and to make components on CNC turning centre.
4. Develop and simulate CNC milling part program and identify errors and to manufacture components on CNC milling machine.
5. Study geometry of robot manipulator, actuators and grippers.
6. Study the various process parameters and their effect on the component machined on ECM & EDM.
Subject Code: PC-ME 693  Category: Professional Core courses
Subject Name: Design Practice Lab  Semester: Sixth
L-T-P: 0-0-3  Credit: 1.5
Contact Per Week- 3P  Contact Week / Semester = 12 minimum
Pre-Requisites: Machine Drawing (PC-ME 393), Machine Design (PC-ME 603)

Course Objective:
1. To understand use of different types mechanical components and determine the safe design under given conditions.
2. To make the students familiar with different design softwares.
3. Understand the design optimization and various methods of optimization.

Course Content:
Design of mechanical components based on Advanced Design Software:

1. At least two assignments on 2-D and 3-D modelling of mechanical components and systems using software packages like AUTOCAD, CATIA, PRO E or similar software.
2. At least two assignment on design analysis of mechanical components using software packages like CATIA, PRO E or similar software.
3. At least one assignment on Design Practice using IS codes, e.g., Pressure vessel codes, Gear design codes etc.
4. At least one assignment on analysis of stress strain and deformation of any mechanical components.

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Design various 2D & 3D models of mechanical components in AUTOCAD, CATIA, PRO E or similar softwares.
2. Design and prepare spur gear using codes.
3. Analyze the stress strain of various mechanical components using different software packages.
4. Investigate the load-deformation behavior of various mechanical components using different software packages.
5. Develop various parts of a mechanical components and assemble them.
6. Conduct group projects, maintain timeliness and follow method oriented approach to problem solving.

Total 36

Course Outcomes:
Upon successful completion of the course, students will be able to

1. Demonstrate Basic knowledge of Different types of Power Plants, site selection criteria of each one of them.
2. Understanding of Thermal Power Plant Operation, turbine governing, different types of high pressure boilers including supercritical and supercharged boilers, Fluidized bed combustion systems.
3. Design of chimney in thermal power plants, knowledge of cooling tower operation, numerical on surface condenser design.
4. Explain the basic knowledge of Different types of Nuclear power plants including Pressurized water reactor, Boiling water reactor, gas cooled reactor, liquid metal fast breeder reactor.
5. Understanding of Power Plant Economics, Energy Storage including compressed air energy and pumped hydro etc.
6. Discuss environmental and safety aspects of power plant operation.

Learning Resources:
1. Power plant Engineering, P.K. Nag (Author), Publisher: Tata McGraw- Hill.
2. A course in Power Plant Engineering, Arora and Domkundwar (Author), Publisher: Dhanpat Rai & Sons.

**Difference with MAKAUT syllabus:**
Following topics are included in this syllabus-
1. Study of electrostatic precipitator, deaeration is included.
2. Detail study of fuels is included.
3. Detail study of condenser, feedwater heaters, circulating water system, cooling towers and cooling ponds are included.

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Understand the working principle of automobile.
2. Understand and analyse the fuel injection system, lighting, lubrication, steering system and cooling process of a automobile.
3. Understand and apply the knowledge of flywheel, clutch, gear box, universal joint in a automobile.
4. Understand and analyse the knowledge of suspension system and design of the front and rear axle of automobile.  
Evaluate the power system of automobile.
5. Understand about the maintenance of automobile.

Learning Resources:
Subject Code: PE-ME 701B  
Category: Professional Elective Courses

Subject Name: Computational Fluid Dynamics  
Semester: Seventh

L-T-P: 3-0-0  
Credit: 3

Pre-Requisites: Fluid Mechanics (PC-ME 302), Mathematics –III (BS-M 301)

Course Objectives:
The objective of the course is to impart knowledge on numerical modeling and its role for the solution of complex engineering problems in the field of heat transfer and fluid dynamics.

Course Contents:

**Course Outcomes:**

**At the end of the course, student will be able to:**

1. Understand the differential equations for flow phenomena and numerical methods for their solution.
2. Analyse different mathematical models and computational methods for fluid flow and heat transfer simulations.
3. Formulate computational problems related to fluid flows and heat transfer.
4. Estimate the accuracy of a numerical solution by comparison to known solutions of simple test problems and by mesh refinement studies.
5. Evaluate forces in both internal and external flows.

**Learning Resources:**

Course Objectives

1. To Create awareness about sources of energy and able to estimate how long the available conventional fuel reserves will last.
2. To Learn the fundamental concepts about solar energy systems and devices.
3. To Design wind turbine blades and know about applications of wind energy for water pumping and electricity generation.
4. To Understand the working of OTEC system and different possible ways of extracting energy from ocean, know about Biomass energy, mini-micro hydro systems and geothermal energy system.

**Course Outcomes**

After the end of the course, a student should be able to:

1. Understand of renewable and non-renewable sources of energy
2. Gain knowledge about working principle of various solar energy systems
3. Understand the application of wind energy and wind energy conversion system.
4. Develop capability to do basic design of bio gas plant.
5. Understand the applications of different renewable energy sources like ocean thermal, hydro, Geo-thermal energy etc.
6. Explain electric energy conversion system.

**Learning Resources:**

4. S. P. Sukhatme and J.K. Nayak, Solar Energy – Principles of Thermal Collection and Storage,
### Syllabus for B. Tech in Mechanical Engineering

(Subject Code: PE-ME 702A)  
**Category:** Professional Elective Courses  
**Semester:** Seventh  
**Contact Per Week- 3L**  
**Contact Week / Semester = 12 minimum**  
**Pre-Requisites:** Production and Operations Management (PC-ME 604)

**Course Objectives:**
1. To provide introductory knowledge on Industrial Engineering, concept of productivity.
2. To make familiar about facility location, facility layout and planning, material handling, systems of production planning and control, forecasting techniques.
3. To understand the technics of inventory management, organizational structure, break even analysis and various wage incentive plans.

<td>4</td>
</tr>
</tbody>
</table>
| 2          | **Plant/Facility Location:** Factors affecting Plant Location, Subjective, Quantitative and Semi-Quantitative techniques.  
**Plant Layout and Planning:** Nature, Significance and Scope of Facility layout and design; Steps in facility layout planning, Assembly Line Balancing.  
**Material Handling:** Definition, Objective and Principles of Material Handling, Classification of Material Handling Devices. | 6 |
| 3          | **Production Planning and Control:** Introduction to Production Systems, Types of production systems (Job, batch& Mass Production), Need and functions of PPC.  
**Constituents of PPC:** Production planning, Routing, Scheduling, Dispatching & Follow up  
**Forecasting:** Definition and Functions of Forecasting, forecasting techniques (linear regression, moving average, exponential smoothing), Analysis of forecast error. Aggregate production planning, Capacity Planning, ERP, Master Production Schedule. Basic sequencing and scheduling techniques. | 9 |
| 4          | **Work Study:** Basic Concept, Steps Involved in Work Study, Techniques of Work Study, Human Factors in the Application of Work Study.  
**Work Measurement:** Basic Concept, Techniques of Work Measurement,  
**Time Study:** Steps Involved in Time Study, Time Study Equipment, Performance Rating, Basic concept and Procedure of Work Sampling Study.  
**Motion Study:** Meaning, Objectives procedures of motion study | 7 |
| 5          | **Inventory Management:** Importance and areas of materials management, Definition of Inventory, Need for inventory, Types of inventory, Inventory costs; Structure of inventory models, **Deterministic models:** Order Quantity, Reorder Point, Lead time, safety stock, EOQ, inventory control systems; Selective inventory management. MRP and JIT-based production systems, Concept of zero inventory, Fundamental concepts of purchasing, storing, distribution, and value analysis & engineering. | 7 |
| 6          | **Organizational Structure:** Line, Functional, Line & Stuff and Complex (Line, functional and staff) organization.  
**Break-Even Analysis (BEP):** Introduction, Functions, Algebraic determination of BEP, Break-Even charts, numerical problems.  
**Wages & Incentives:** Types of Wages, Wage Incentive Plans; Individual & Group Incentive Plans. | 3 |
Course Outcomes:
Upon successful completion of the course, students will be able to
1. Understand the concepts of Industrial Engineering.
2. Explain production systems and their characteristics.
3. Describe different aspects of work system design and facilities design pertinent to manufacturing industries.
4. Apply forecasting and scheduling techniques, time study and work measurement techniques and inventory management tools to the various production systems.
5. Analyze and Evaluate complex Industrial problems.
6. Create a new facility layout and material handling technique in order to increase productivity.

of arrivals, distribution of service times, queue discipline, steady stage operation; Single channel model with Poisson arrivals and exponential service time; Multiple channel model with Poisson arrival and exponential service times; Single channel model with Poisson arrivals and arbitrary service time (M/G/1); Economic analysis of waiting lines.

| 8 | **Non-Linear Programming:** Graphical illustration of a non-linear programming problem; Unconstrained optimization by (i) direct search method, (ii) steepest decent method; Constrained optimization by Lagrange multipliers; Integer linear programming by branch & bound technique; Dynamic programming problems and their characteristics; Bellman’s principle of optimality; solving (i) Stagecoach problem, (ii) Knapsack problem. | 3 |

**Total** 36

**Course Outcomes:**

Upon successful completion of the course, students will be able to

1. Understand the concepts of Operation Research.
2. Explain objectives of various operations research tools.
3. Formulate different industrial problems with respect to the different Operations Research tools.
4. Apply different operations research tools to solve those industrial problems.
5. Analyse and evaluate after solution of those industrial problems.
6. Create new decision-making tools, optimization tool, scheduling techniques etc. for solving industrial problems.

**Learning Resources:**

4. R. Panneerselvam, Operations Research, Prentice Hall of India
Subject Code: PE-ME 702C  Category: Professional Elective Courses
Subject Name: Principles and Practices of Management  Semester: Seventh
L-T-P: 3-0-0  Credit: 3
Contact Per Week- 3L  Contact Week / Semester=12 minimum
Pre-Requisites: Production and Operations Management (PC-ME 604)

Course Objectives:
1. To provide an understanding of basic concepts, principles and practices of management.
2. To emphasize on the conceptual development in the area of planning, organizing, leading and controlling managerial functions.
3. To emphasis on conceptual and technical frameworks of leadership and the role of managers and change agent.

Course Outcomes
Upon successful completion of the course, student will be able to
1. Identify the scope and significance of Marketing in Domain Industry.
2. Examine marketing concepts and phenomenon to current business events In the Industry.
3. Coordinate the various marketing environment variables and interpret them for designing marketing strategy for business firms
4. Relate Marketing Mix as a framework for Marketing Decision making.
5. Illustrate market research skills for designing innovative marketing strategies for business firms
6. Practice marketing communication skills relevant to the corporate world.

Learning Resources:
Course Objective:
The overall goal of this course is to enable you to build an IoT system from the ground up. Note, this is an IoT system; as you’ll learn, there’s extensive variety insofar as what an IoT system can be. That said, during this course, you’ll learn the various kinds of IoT systems that you’ll encounter and build one using representative technologies.

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Describe what IoT is and how it works today
2. Recognise the factors that contributed to the emergence of IoT
3. Design and program IoT devices
4. Use real IoT protocols for communication
5. Secure the elements of an IoT device
6. Design an IoT device to work with a Cloud Computing infrastructure

Learning Resources:
### Course Objectives:

1. To provide students with a broad interdisciplinary liberal arts framework for understanding the relationship between humans and their environment.
2. To provide students with informed perspectives on biological and physical processes relevant to environmental problems, to help students understand responsible environmental policy and practice, and to engage students in ethical reflection regarding environmental problems in local, regional, national, and global communities.
3. To prepare students for careers, citizenship and environmental stewardship through experiential curricular and co-curricular opportunities.
4. To equip students with the knowledge and skills necessary to pursue professional careers and advanced study related to the multi-faceted nature of environmental studies.
5. To serve as an environmental resource, through service, outreach and engagement, to the Chicago metropolitan region.

</thead>
<tbody>
<tr>
<td>2</td>
<td><strong>Ecology</strong> Elements of ecology: System, open system, closed system, definition of ecology, species, population, community, definition of eco system components types and function. Structure and function of the following ecosystem: Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, Mangrove ecosystem (special reference to Sundar ban); Food chain [definition and one example of each food chain], Food web. Biogeochemical Cycle- definition, significance, flow chart of different cycles with only elementary reaction [Oxygen, carbon, Nitrogen, Phosphate, Sulphur]. Bio-diversity- types, importance, Endemic species, Biodiversity Hot-spot, Threats to biodiversity, Conservation of biodiversity.</td>
<td>4</td>
</tr>
<tr>
<td>3</td>
<td><strong>Air pollution and control</strong> Atmospheric Composition: Troposphere, Stratosphere, Mesosphere, Thermosphere, Tropopause and Mesopause. Energy balance: Conductive and Convective heat transfer, radiation heat transfer, simple global temperature model [Earth as a black body, earth as albedo], Problems.</td>
<td>6</td>
</tr>
</tbody>
</table>
Green house effects: Definition, impact of greenhouse gases on the global climate and consequently on sea water level, agriculture and marine food. Global warming and its consequence, Control of Global warming. Earth’s heat budget.

Lapse rate: Ambient lapse rate Adiabatic lapse rate, atmospheric stability, temperature inversion (radiation inversion).

Atmospheric dispersion: Maximum mixing depth, ventilation coefficient, effective stack height, smokestack plumes and Gaussian plume model.

Definition of pollutants and contaminants, Primary and secondary pollutants: emission standard, criteria pollutant.

Sources and effect of different air pollutants- Suspended particulate matter, oxides of carbon, oxides of nitrogen, oxides of sulphur, particulate, PAN.

Smog, Photochemical smog and London smog.

Depletion Ozone layer: CFC, destruction of ozone layer by CFC, impact of other greenhouse gases, effect of ozone modification.

Standards and control measures: Industrial, commercial and residential air quality standard, control measure (ESP, cyclone separator, bag house, catalytic converter, scrubber (ventury), Statement with brief reference).

**Water Pollution and Control**

Hydrosphere, Hydrological cycle and Natural water.

Pollutants of water, their origin and effects: Oxygen demanding wastes, pathogens, nutrients, Salts, thermal application, heavy metals, pesticides, volatile organic compounds.

River/Lake/ground water pollution: River: DO, 5 day BOD test, Seeded BOD test, BOD reaction rate constants, Effect of oxygen demanding wastes on river[deoxygenation, reaeration], COD, Oil, Greases, pH.

Lake: Eutrophication [Definition, source and effect].

Ground water: Aquifers, hydraulic gradient, ground water flow (Definition only)

Standard and control: Waste water standard [BOD, COD, Oil, Grease], Water Treatment system [coagulation and flocculation, sedimentation and filtration, disinfection, hardness and alkalinity, softening]

Waste water treatment system, primary and secondary treatments [Trickling filters, rotating biological contractor, Activated sludge, sludge treatment, oxidation ponds] tertiary treatment definition.

Water pollution due to the toxic elements and their biochemical effects: Lead, Mercury, Cadmium, and Arsenic.

**Land Pollution**

Lithosphere; Internal structure of earth, rock and soil.

Solid Waste: Municipal, industrial, commercial, agricultural, domestic, pathological and hazardous solid wastes; Recovery and disposal method- Open dumping, Land filling, incineration, composting, recycling.

Solid waste management and control (hazardous and biomedical waste).

**Noise Pollution**

Definition of noise, effect of noise pollution, noise classification [Transport noise, occupational noise, neighbourhood noise]

Definition of noise frequency, noise pressure, noise intensity, noise threshold limit value, equivalent noise level, $L_{10}$ (18hr Index), $n Ld$. Noise pollution control.

**Environmental Management:**

Environmental impact assessment, Environmental Audit, Environmental laws and protection act of India, Different international environmental treaty/ agreement/ protocol.

**Course Outcomes:**

Upon successful completion of the course, students will be able to

1. Articulate the interconnected and interdisciplinary nature of environmental studies.
2. Demonstrate an integrative approach to environmental issues with a focus on sustainability.
3. Use critical thinking, problem-solving, and the methodological approaches of the social sciences, natural sciences, and humanities in environmental problem solving.
4. Communicate complex environmental information to both technical and non-technical audiences;
5. Understand and evaluate the global scale of environmental problems.
6. Reflect critically on their roles, responsibilities, and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Haldia Institute of Technology  
(An Autonomous Institution Under Maulana Abul Kalam Azad University Of Technology, West Bengal)  
Syllabus for B. Tech in Mechanical Engineering  
(Applicable from the academic session 2020-2021)

Subject Code: PE-ME 801A  
Category: Professional Elective Courses  
Subject Name: Additive Manufacturing  
Semester: Eighth  
L-T-P: 3-0-0  
Credit: 3  
Contact Per Week: 3L  
Contact Week / Semester=12 minimum  
Pre-Requisites: Manufacturing Processes (PC-ME 404), Modern Manufacturing Processes (PC-ME 602)

Course Objectives:
1. To introduce students the basics of additive manufacturing/rapid prototyping and its applications in various fields, reverse engineering techniques.
2. To familiarize students with different processes in rapid prototyping systems.
3. To teach students about mechanical properties and geometric issues relating to specific rapid prototyping applications.

Course Content:

<table>
<thead>
<tr>

</tbody>
</table>

Course Outcomes:

**Upon successful completion of the course, students will be able to**

1. To discuss the basic principles underlying additive manufacturing processes.
2. Demonstrate a basic technical understanding of the physical principles, materials, and operation of the types of AM processes.
3. Demonstrate the ability to identify characteristics of parts that are fabricated by AM processes.
4. To define on how to model and simulate some AM processes to predict the results of material processing operations.
5. Understand models of material processing phenomena and apply them to simulate AM process operations.
6. Explain about the relationships between AM process phenomena and part accuracy and surface finish.

Course Outcomes:
Upon successful completion of the course, students will be able to

1. Understand Engineering Production levels and types of production; piece, batch, lot, mass and quantity production.
2. Recognize and understand the need, degrees and types of automation and role of automation in industrial production.
3. Understand the concepts of various Quantity Production methods.
4. Plan, schedule, design and use jigs and fixtures for batch production in machine shops.
5. Analyze Productivity and quality enhancement in Quantity production.
6. Understand the use of some modern technologies in the area of Quantity Production Methods.
Learning Resources:

Haldia Institute of Technology
(An Autonomous Institution Under Maulana Abul Kalam Azad University Of Technology, West Bengal)
Syllabus for B. Tech in Mechanical Engineering
(Applicable from the academic session 2020-2021)

Subject Code: PE-ME 801C  Category: Professional Elective Courses
Subject Name: Engineering Tribology  Semester: Eighth
L-T-P: 3-0-0  Credit: 3
Contact Per Week- 3L
Pre-Requisites: Fluid Mechanics (PC-ME 302), Machine Design (PC-ME 603)

Course Objectives:
1. To become familiar with adhesion theories and the effect of adhesion on friction and wear.
2. To gain knowledge on the friction/lubrication mechanisms and know how to apply them to the practical engineering problem.

Course Content:

<table>
<thead>
<tr>
<th>Module No.</th>
<th>Description of Topic</th>

<td>2</td>
</tr>
<tr>
<td>5</td>
<td><strong>Hydrodynamic lubrication:</strong> Theory of hydrodynamic lubrication; pressure development mechanism in oil film; two-dimensional Reynold’s equation, infinitely long journal bearing, infinitely short journal bearing, and finite bearing. Hydrodynamic thrust bearing: Introduction; flat plate thrust bearing; pressure equation; load; centre of pressure.</td>
<td>4</td>
</tr>
<tr>
<td>6</td>
<td><strong>Hydrostatic Lubrication:</strong> Basic concept; advantages and limitations; viscous flow through rectangular slot; load carrying capacity and flow requirement of hydrostatic step bearing; energy losses; optimum design of step bearing.</td>
<td>4</td>
</tr>
<tr>
<td>7</td>
<td><strong>Elasto-hydrodynamic Lubrication:</strong> Introduction; Contact stresses (Simplifying assumptions to Hertz's theory); Contact between two elastic spherical or spheroidal bodies; Elasto hydrodynamic lubricating films; Micro-elastohydrodynamic lubrication and mixed or partial EHL.</td>
<td>4</td>
</tr>
<tr>
<td>8</td>
<td><strong>Surface Engineering:</strong> Introduction to surface engineering; concept and scope of surface engineering; <strong>Coating:</strong> Electro and electroless plating; metal spraying; cladded coating; selection of coating for wear and corrosion resistance; potential properties and parameters of coating.</td>
<td>4</td>
</tr>
</tbody>
</table>

Total 36

Course Outcomes:
Upon successful completion of this course, students will be able to
1. Develop knowledge on surface topography
2. Know how to model a rough engineering surface
3. Understand the fundamental principles in the field of tribology.
4. Analyze the mechanisms of friction and wear in mechanical system.
5. Establish the concepts on the design of lubrication system.
6. Apply the concept of surface engineering in industrial applications.

Learning Resources:
5. A. Cameron, Basic Lubrication Theory, Wiley Eastern Ltd., 1976
Subject Code: PE-ME 802A  
Category: Professional Elective Courses  
Subject Name: Supply Chain Management  
Semester: Eighth  
L-T-P: 3-0-0  
Credit: 3  
Pre-Requisites: Production and Operations Management (PC-ME 604), Operations Research (PE-ME 702B), Principles and Practices of Management (PE-ME 702C)  

Course Objective:  
To develop a sound understanding of the important role of supply chain management in today's business environment. Become familiar with current supply chain management trends, understand and apply the current supply chain theories, practices and concepts utilizing case problems and problem-based learning situations.

Course Outcomes:  
Upon successful completion of the course, students will be able to

1. Students will be able to develop a sound understanding of the important role of supply chain management in today’s business environment.
2. Students will be familiar with current supply chain management trends, understand and apply the current supply chain theories, practices and concepts utilizing case problems and problem-based learning situations.
3. Students will be able learn to use and apply computer-based supply chain optimization tools including the use of selected state of the art supply chain software suites currently used in business.
4. Students will be able to design, develop and utilize critical management skills such as negotiating, working effectively within a diverse business environment, ethical decision making and use of information technology.
5. Students will be able to instill the knowledge of supply chain design and demonstrate critical thinking, team building and presentation skills as applied to supply chain problems.
6. Students will be able to apply critical and analytical thinking skills in problem solving situations in real life complex industrial scenario.
Learning Resources:
1. Supply Chain Management: Strategy, Planning and Operation by Sunil Chopra and Peter Meindl.
2. Essentials of Supply Chain Management by Michael H Hugos.
   Logistics and Supply Chain Management by Martin Christopher
3. The Supply Chain Revolution by Suman Sarkar.
Subject Code: PE ME 802 B  
Category: Professional Elective Courses  
Subject Name: Total Quality Management  
L-T-P: 3-0-0  
Credit: 3  
Contact Per Week: 3L  
Contact Week / Semester = 12 minimum  
Pre-Requisites: Production and Operations Management (PC-ME 604), Operations Research (PE-ME 702B), Principles and Practices of Management (PE-ME 702C)

**Course Objective:**
To impart the basic knowledge of quality, evolution of quality improvement and management towards Total Quality Management (TQM) plan for the organization.

**Course Content:**

<tr>
<td>8</td>
<td>Emerging concepts of quality management: Traditional versus modern quality management; Taguchi’s concept of off-line quality control; Strength and Weakness of Taguchi’s ideas Deming’s philosophy; The Juran Philosophy; Just In Time (JIT); benchmarking; Business Process Re-engineering (BPR), Supply Chain Management (SCM).</td>
<td>4</td>
</tr>
</tbody>
</table>

**Course Outcomes:**
Upon successful completion of the course, students will be able to

1. Students will be able to understand and discuss various dimensions of product and service quality.
2. Students will be able to assess and apply different TQM Principles for quality improvement in organization.
3. Students will be able to distinguish various TQM tools and techniques used in Manufacturing and Service sectors.
4. Students will be able to utilize QFD tool to design and develop a new product as per customer requirements.
5. Students will be able to explain various ISO Standards and Quality systems practiced in various sector.
6. Students will be able to summarize the basic concepts in total quality management relevant to manufacturing and service Sectors.

Learning Resources:

1. Quality Planning and Analysis by JM Juran and Gryna.
3. Total Quality Management – An Introductory Text by Paul James, Prentice Hall.
Course Objectives:
1. To describe the role of information technology and decision support systems in business
2. To introduce the fundamental principles of computer-based information systems analysis and design and develop an understanding of the principles and techniques used.
3. To provide various knowledge representation methods and different expert system structures as strategic weapons to counter the threats to business and make business more competitive.
4. To use information to assess the impact of the Internet and Internet technology on electronic commerce and electronic business and understand the specific threats and vulnerabilities of computer systems.
5. To provide the theoretical models used in database management systems to answer business questions

| 1         | **Introduction to Industry 4.0:** History of Industrial Revolution: Duration, motivation, major theme. Definition of Industry 4.0: What is it all about and why it is necessary? The motivation: German Federal Govt. initiative, Developments in USA, Europe, China and other countries  
Comparison of Industry 4.0 Factory and today's Factory, the 10 most important things that will change with Industry 4.0, Difference between conventional automation and Industry 4.0. | 3 |
| 2         | **Basic principles and technologies of a Smart Factory:** 9 pillars of Industry 4.0, Concept of smart factory: Conceptual framework, scenarios, and future perspectives; Smart design, smart manufacturing, smart scheduling, smart monitoring and control, smart decision-making.  
Internet of Things (IoT) & Industrial Internet of Things (IIoT) & Internet of Services, Big data, Cyber-Physical Systems (CPS), Cyber-Physical Production Systems (CPPS), Value chains in manufacturing companies, Customization of products, Digital Twins, Cloud Computing / Cloud Manufacturing, Security issues within Industry 4.0 networks. | 3 |
| 3         | **Cyber-Physical Systems (CPS) and Cyber-Physical Production Systems (CPPS):** What are cyber-physical systems? (Definitions, demarcation to embedded systems, ubiquitous computing, etc.), Core elements of Cyber-Physical Systems and Cyber-Physical Production Systems, 5C architecture of CPPS, Schematic representation of CPPS, Control theory and real-time requirements, Communication in cyber-physical systems, Interplay between CS, ICT and manufacturing. Design Methods for Cyber-physical Systems (Modelling, Programming, Model-Integrated Development), Applications for cyber-physical systems (examples of existing or future applications in the field of manufacturing.) | 3 |
| 4         | **The smart work piece:** The intelligent work piece as basic functionality in implementing Industry 4.0; What is an intelligent work piece? How to make a work piece intelligent? Work piece tagging, QR codes and RFID, Communication between work piece and environment, Multi-agent systems in production: Definition of an agent and agent-based systems, properties of MAS, advantages. Applications for smart work pieces (examples of existing or future applications in the field of manufacturing.  
**Digital Twins in Production:** Basic concepts of Digital Twins: Benefits, impact and challenges; Features and Implementation of Digital Twins, Types of Digital Twins, Digital Twin use cases, Applications for digital twins in production (examples of existing or future applications in the field of manufacturing), Cyber-physical modules for machine tools, Machine tool 4.0 (CPMT): Concept, features, implementations, advantages, and challenges. | 7 |
| 5         | **The six main use-cases for Augmented Reality in Manufacturing:** AR-devices an Overview (different versions, Videos)  
• Use case 1: Integrating Design and Manufacturing  
• Use case 2: Training Shop floor Workers  
• Use case 3: Supporting complex Assembly Operations  
• Use case 4: Service and Maintenance  
• Use case 5: Supporting complex Sales solutions  
• Use case 6: Executive Oversight and Data Visualization  
Applications with Augmented Reality (examples of existing or future applications in the field of manufacturing) | 4 |
**Interoperability: Communication systems and standards for Industry 4.0 and cloud applications:** Industrial communication, Industrial Internet of Things (IIoT), The Industry 4.0 Reference Architecture Model RAMI4.0, Basics on Service oriented Architecture, OPC-UA as future standard in Industry 4.0, Machine to machine interaction in practice (examples of existing or future applications in the field of manufacturing).

**OPC-UA in Detail:** Introduction to OPC, Classic OPC vs. OPC-UA, Information Modelling, Standard Information Model, OPC Services, System Architecture, Profiles OPC-UA and the Cloud. OPC-UA in practice (examples of existing or future applications in the field of manufacturing).

**Cloud Manufacturing and the connected factory:** Virtualization, Cloud Platforms, Big data in production, Cloud-based ERP and MES solutions, Connected factory applications, IT security for cloud applications.

**Safety and Security in networked Production Environments**

Subject Code: PE-ME 803C
Category: Professional Elective Courses

Subject Name: Fluid Power Control
Semester: Eighth
L-T-P: 3-0-0
Credit: 3

Contact Per Week- 3L
Contact Week / Semester = 12 minimum

Pre-Requisites: Fluid Mechanics (PC-ME 302)

Course Objectives:
1. To learn about different hydraulic and pneumatic fluid power systems.
2. To learn about different components of fluid power systems.
3. To understand the design procedure for hydraulic and pneumatic fluid power systems.
4. To grasp the fluid mechanical principles that govern the operation of the fluid power systems.
5. To know about the controls and accessories of fluid power systems.

Course Contents:

<table>
<thead>
<tr>
<th>Module No.</th>
<th>Description of Topic</th>
<th>Lectures Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td><strong>Introduction to fluid power systems:</strong> applications, advantages and limitations. Components of a hydraulic and pneumatic system. Properties of fluids: pressure, head, force, density, specific gravity, kinematic and absolute viscosity, compressibility and incompressibility. Desired properties of a hydraulic fluids. Classification of hydraulic fluids. Fluid mechanical principles and their applications: Pascal’s law; analysis of simple hydraulic jack, mechanical advantage; Conservation of mass: continuity equation. Conservation of energy. hydraulic power of a cylinder, hydraulic siphon. Losses in pipe flow.</td>
<td>4</td>
</tr>
<tr>
<td>2</td>
<td><strong>Hydraulic pumps:</strong> Classification of hydraulic pumps. Construction, working principle, efficiency analysis, advantages, limitations and application of different types of pumps: positive displacement pump, gear pump, vane pump, lobe pump, screw pump, piston pump. Pump performance analysis. Factors for pump selection.</td>
<td>6</td>
</tr>
<tr>
<td>4</td>
<td><strong>Hydraulic Valves:</strong> Direction control valves: Classification, operation and graphical symbols. Different modes of activation of valves. <strong>Pressure control valves:</strong> Classification, construction and working principle. <strong>Flow control valves:</strong> Classification, construction and working principle.</td>
<td>4</td>
</tr>
<tr>
<td>5</td>
<td><strong>Hydraulic circuit design and analysis:</strong> Representation of hydraulic components through ANSI symbols. Analysis of different hydraulic circuits, speed control of a hydraulic motor, circuit to lift and hold heavy load, automatic sequencing of two cylinders. Servo valves: classifications, operating principles and performance analysis. Accumulators: classifications, working principles, application. Fluid power systems accessories: seals, reservoirs, filters and strainers. Maintenance of fluid power systems.</td>
<td>6</td>
</tr>
</tbody>
</table>
pneumatic components; compressed air distribution system in a plant; drawing pneumatic circuits for different operations. Pneumatic actuators. Pneumatic control valves.

Electro-pneumatic control: Use of electrical devices for controlling fluid circuits; function of electrical devices like push-button switches, limit switches, pressure switches, solenoids, electronic sensors, relays and timers and their symbols; concept of ladder diagram; study of circuits using electrical control devices such as control of a solenoid actuated cylinder using one limit switch, reciprocation of a cylinder using pressure or limit switches, and two cylinder sequencing circuit using two limit switches.

</tbody>
</table>

Course Outcomes:
Upon successful completion of the course, students will be able to:
1. Illustrate different types of fluid power control systems and their applications.
2. Understand and analyse working principles of different components of a hydraulic pump and actuators.
3. Analyse about various hydraulic valves with their designs.
4. Discuss about working and applications of different components of pneumatic systems.
5. Understand and analyse working principles Electro-pneumatic control systems.
6. Explain the design of various fluid power systems for specific applications.

Learning Resources:
Haldia Institute of Technology  
(An Autonomous Institution Under Maulana Abul Kalam Azad University Of Technology, West Bengal)  
Syllabus for B. Tech in Mechanical Engineering  
(Applicable from the academic session 2020-2021)

</tr>
</tbody>
</table>

**Total 36**

Course Outcomes:
Upon successful completion of the course, students will be able
1. To develop the understanding of the concept of human resource management and to understand its relevance in organizations.
2. Explain the Human Resource Planning.
3. To develop necessary skill set for application of various HR issues like Recruitment and Selection, Human Resource Development etc.
4. Define the Industrial Relations in India, Workers’ Participation in Management, Discipline Management.
5. To analyse the strategic issues and strategies required to select and develop manpower resources.
6. To integrate the knowledge of HR concepts to take correct business decisions.

Learning Resources:
1. Agarwala T. - Strategic Human Resource Management, OUP
4. Ramaswamy, E.A. - Managing Human Resources, OUP
Subject Code: OE - ME 801B   Category: Open Elective Courses
Subject Name: Entrepreneurship   Semester: Eighth
L-T-P: 3-0-0   Credit: 3
Contact Per Week- 3L   Contact Week / Semester=12 minimum
Pre-Requisites: No- Prerequisites

Course Objectives:
1. Will be able to develop knowledge on how to assess business opportunities and an in-depth understanding of what typically characterize successes and failures
2. Will be able to develop about key processes necessary to bring new products and services to market and key challenges facing the entrepreneur at different stages of the entrepreneurial voyage
3. Will be able to develop an understanding of scientific research methods and theories relevant for the field
4. Will be able to assess the commercial viability of new technologies, business opportunities and existing companies
5. Will be able to plan, organize, and execute a project or new venture with the goal of bringing new products and service to the market

Course Content:

</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td><strong>Introduction:</strong> Concept of Entrepreneurship - need and scope for entrepreneurship - Entrepreneur and society- qualities of entrepreneur Risks, relevance and benefits of small-scale Industry - definition of tiny, small ancillary industry - prevailing industrial policy of SSI - incentives and benefits of SSI units.</td>
<td>6</td>
</tr>
<tr>
<td>2</td>
<td>Motivation theories - Maslow, McClelland - Motivation model - need, want, motive and behaviour – attitude towards work - self assessment and goal setting - Achievement, motivation and behaviour measurement, SWOT analysis, TA analysis - Stress and conflict management; coping with uncertainty; creativity and innovation.</td>
<td>6</td>
</tr>
<tr>
<td>3</td>
<td><strong>Project identification and formulation:</strong> Sources of information - opportunity guidance - choice of technology and its evaluation; consumer behaviour; market survey and research; demand and resource based industry- servicing industry - import substitution- Techno economic feasibility assessment – short listing, preliminary project report, detailed project report, assessing viability and feasibility of a report.</td>
<td>6</td>
</tr>
<tr>
<td>4</td>
<td><strong>Forms of business organizations/ownership</strong> - formation of a Company - procedures and formalities for setting up of new industry-sources of information to contact for what and where - subsidies and concessions for SSI - role of State and Central Government Agencies in promotion of Small Scale Industry. Sickness and nursing of sickness in SSI.</td>
<td>6</td>
</tr>
<tr>
<td>5</td>
<td><strong>Labour Laws</strong> - The Factories Act 1948, Minimum Wages Act - Payment of Wages 1936, Workmen Compensation Act, 1923.</td>
<td>1</td>
</tr>
<tr>
<td>6</td>
<td>Taxation - State and Central - Concessions.</td>
<td>2</td>
</tr>
<tr>
<td>7</td>
<td><strong>Introduction to e-business:</strong> EDI and e-commerce; EDI standard, implementation and Tools; e-commerce imperatives,</td>
<td>3</td>
</tr>
<tr>
<td>8</td>
<td><strong>e-commerce applications:</strong> 1 - Markets, Customer care, Vendor Management and Extended supply chain management; security aspects - cryptography, digital signature, digital watermarking, secured socket layers, understanding threats to security, securing internet connections, Firewall techniques, electronic payment systems - ATM model, Payment Models, credit card based payment system, 1st virtual banking, e-cash, smart cards; Electronic Data interchange EDI) - Value added networks.</td>
<td>6</td>
</tr>
<tr>
<td></td>
<td><strong>Total</strong></td>
<td>36</td>
</tr>
</tbody>
</table>

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Understand the nature of entrepreneurship
2. Understand the function of the entrepreneur in the successful, commercial application of innovations
3. Confirm an entrepreneurial business idea
4. Identify personal attributes that enable best use of entrepreneurial opportunities
5. Explore entrepreneurial leadership and management style.
6. Define various e-commerce applications
Learning Resources:
2. Entrepreneurial Development by P. Saravanavel.
Subject Code: OE - ME 801C
Category: Open Elective Courses
Subject Name: Industrial Safety
Semester: Eighth
L-T-P: 3-0-0
Credit: 3
Pre-Requisites: No- Prerequisites

Course Objectives:
1. To know the safety rules and regulations, standards and codes applicable for engineering industry.
2. To study various mechanical machines and their safety importance.
3. To understand the principles of machine guarding and operation of protective devices.
4. To know the working principle of mechanical engineering processes such as metal forming and joining process and their safety risks.
5. Developing the knowledge related to health and welfare measures in engineering industry.

Course Content:

<table>
<thead>
<tr>
<th>Module No.</th>
<th>Description of Topic</th>
<th>Contact Hrs.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Development of industrial safety: Developments in Occupational Health, Occupational Safety and Health in India</td>
<td>2</td>
</tr>
<tr>
<td>4</td>
<td>Occupational health and safety: Occupational Health, Occupational Health Services in Places of Employment, Occupational Physician, Occupational Health in Developing Countries, Occupational Safety, Occupational Safety in Developing Countries, Promoting Occupational Health and Safety, Work Related Diseases, Occupational Health Hazards Recognition of Hazards, Industrial Hygiene, Occupational Diseases, basics of OHSAS 18001</td>
<td>6</td>
</tr>
</tbody>
</table>

Total 36

Course Outcomes:
Upon successful completion of the course, students will be able to
1. Analyze the effect of release of toxic substances
2. Understand the industrial laws, regulations and source models.
3. Apply the methods of prevention of fire and explosions.
4. Understand the relief and its sizing methods.
5. Understand the methods of hazard identification and preventive measures.
6. Explain Accident compensation considering various laws.

Learning Resources:
10. Practical Health & Safety Management for small business- Jacqueline Jaynes, 2000, Butterworth Heinemann,
11. Industrial Safety and Human Behaviour, H. L. Kalia, AITBS Publishes, India.
The additional requirement of MAR points applies to every student, who is admitted to the 4 years B.Tech program under Autonomy, as per following:

<table>
<thead>
<tr>
<th>Level of Entry in B.Tech Course</th>
<th>Total duration for earning Points</th>
<th>Minimum Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st Year from the academic year 2020-21 onwards</td>
<td>1st to 4th Year</td>
<td>100</td>
</tr>
<tr>
<td>2nd Year from the academic year 2020-21 onwards (Lateral Entry)</td>
<td>2nd to 4th Year</td>
<td>75</td>
</tr>
</tbody>
</table>

These points must be earned on the basis of active participation in co-curricular and extracurricular activities spanning through all the semesters of study. Every student may choose, as per his/her liking, activities in order to achieve the mandatory points (as per Table-I, depending on his/her entry level), before becoming eligible for award of the Degree. These activities can be spread over the years, as per convenience of the student.

Notes:

- Every student shall participate in the co-curricular and extra-curricular activities and produce documentary proof to the designated Faculty Members appointed by the Head of Department / Principal / Director in the respective college. Thereby the student should earn the required Points before her she appears for his/ her Final Examinations.
- A student's result of his/her Final Examinations will be withheld until he/she completes the minimum Activity Points by the end of his/her B.Tech Program.
- In every semester, every student is required to prepare a file containing documentary proofs of activities, done by him / her. This file will be duly verified and Activity Points will be assigned by the teachers as appointed above, at the end of every semester.
- The college will form a 3 members committee and finalize the Activity Points for each student before entering them into the Online Point Entry System of the Institute.
- Every student has to earn at least 100 / 75 (for lateral) activity points. The points students has earned will be reflected in the student's mark sheet.
- Activity points earned by Lateral Entry students will be multiplied by 1.33.
Table I provides a List of Activity Heads and Sub-Activity Heads along with their capping of the Activity Points that can be earned by the students during the entire B.Tech duration.

Engineering education has evolved globally in a continuous manner to address the twin needs of industry and society. It is now an accepted fact that the institutions imparting technical education should aspire to create manpower who will possess strong technical knowledge and skill, have leadership qualities and be a team player, capable of coming up with innovative solutions and be alive to societal and community concerns. The aim of the Induction Programme is to acclimatize the students to the environment of their engineering institution, give them a flavour of the exciting new world of education that they are entering, provide them with mentoring schemes, and make them aware of their neighbourhood, society and people. This will allow them to evolve as well rounded individuals.

The following schedule is laid down by the Institute to implement the three week long Induction Programme:

<table>
<thead>
<tr>
<th>Week 1</th>
<th>1st Half</th>
<th>Day 1</th>
<th>Overall introduction of the new students to the Institution, its different Departments &amp; Faculty Members</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2nd Half</td>
<td>Day 1</td>
<td>(a) Assignment of faculty mentors to the new students (b) Assessment and allotment for mentoring by senior students preferably from the second year</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2 hrs</td>
<td>Lectures by eminent personalities on different areas such as (a) Introduction to Engineering (b) Various topics of science and technology (c) Innovation and entrepreneurship (d) Creative and performing arts (e) Social issues</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2 hrs</td>
<td>Day 2, 3, 4, 5 Participation in Games, Yoga, Meditation etc.</td>
</tr>
<tr>
<td></td>
<td>2 hrs</td>
<td>Day 2, 3, 4, 5</td>
<td>Visit to the different Departments of the Institute</td>
</tr>
<tr>
<td>Week 2</td>
<td>2hrs</td>
<td></td>
<td>Scheduled class lectures as per time table.</td>
</tr>
<tr>
<td>(AllDays)</td>
<td>2hrs</td>
<td></td>
<td>Students to be conducted through proficiency modules to be prepared by respective Colleges for ascertaining English skills &amp; Computer knowledge of the students and to prepare a report on the same</td>
</tr>
<tr>
<td></td>
<td>2hrs</td>
<td></td>
<td>Participation in Games, Sports, Yoga, Creative arts etc.</td>
</tr>
<tr>
<td>Week 3</td>
<td>2hrs</td>
<td></td>
<td>Scheduled class lectures as per time table</td>
</tr>
<tr>
<td></td>
<td>Day 1</td>
<td></td>
<td>Visits to neighbourhood locations</td>
</tr>
<tr>
<td></td>
<td>Day 2</td>
<td></td>
<td>Visits to natural spots in adjoining areas to understand the effect of nature on society</td>
</tr>
<tr>
<td></td>
<td>Day 3</td>
<td></td>
<td>Visits to Science Museum / laboratories</td>
</tr>
<tr>
<td></td>
<td>Day 4</td>
<td></td>
<td>Visits to NGOs</td>
</tr>
<tr>
<td></td>
<td>Day 5</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
The minutes of the meeting of BOS, ME department at HIT, Haldia, held on 9/3/2022.

The agendas of the meeting are as follows:

**Agenda 1:** Finalisation of curricula
The entire curricula is finalised with provision for internship as per AICTE norms.

**Agenda 2:** Detailed syllabus
Syllabus framed is found to be satisfactory. However for few courses, numbers of modules proposed are too many, which needs to be reduced suitably within 7-8 modules.

**Agenda 3:**
Pre-requisites should be clearly mentioned with reference to the previous subject codes.

**Agenda 4:**
BOS members will meet suitably in future to revisit the effect of implementation and necessary changes will be incorporated.
Department of Mechanical Engineering, HIT Haldia

Attendance for the BOS meeting held in the department on 09/03/2022 at smart class room (2003)
