

In today's growing pace in aerospace sector we need more people to take a bent and explore the unexplored. India launched their first private rocket few days ago and now isro is one of the most efficient working space agency accross globe.

Several colleges like amity university , vit vellore,iit kanpur,iit bombay have their own aerospace club where they conduct several competition,design rockets, participate in various competition and last but not the least enrich the knowledge among their students by several workshops and events.

Haldia Institute Of Technology is known for its Manab racing and vidyut racing type technical clubs but why will we keep the space sector unexplored. We can manufacture our own wings to fly high and thus add up to the glory of HIT and glory of indian youth. So I propose to form a club named UDAAN that will be based on designing of rockets,gliding planes and jet missiles. We are trying to work on the same and submit a prototype of the model with in few months.

And this prototype is not the final one that we will take to competitions or exhibitions this is just a teaser to the bright future of our department that will take the udaan towards the unthinkable side of the universe.

Thanking you,
Debayan Roy.
